# **BMW** wins Rolls-Royce auction with £300m bid

By Roger Taylor and Graham Bourley

BMW, the German carmaker, is to take over Rolls-Royce Motor Cars for more than £300m (\$501m). Vickers, the engineering group which owns the UK luxury carmaker, is expected to announce today that it has agreed to accept BMW's bid.

The speed with which the deal has been tied up will surprise other bidders, not least BMW's rival Volkswagen. Both had submitted bids last week, with BMW ahead of VW.

VW had been considering increasing its bid but with BMW pressing for a quick settlement, it appears to have been overtaken by the speed of events. Yesterday, VW's press office said it was not aware a deal had been struck. Vickers shareholders will be

pleased that the company has brought the negotiations to such a rapid conclusion. Some feared that by publicly auctioning the company rather than negotiating privately with potential buyers, Vickers had committed itself to a sale without ensuring there was adequate interest from buvers. There were concerns that the process could drag on for several The price of more than £300m

falls below the top end of expectations. The potential value of the Rolls-Royce brand and the company's status as a trophy asset had led some to speculate that Vickers might get £400m or more. However, Vickers will not be unhappy with a price which is re than twice BMW's opening offer of £150m. The decision is bound to pro-

duce complaints of unfairness from other bidders. Two other groups made it into the last stages of the auction: Doughty Hanson, the venture capital group, and a consortium of Rolls-Royce enthusiasts led by Kevin Morley, former Rover Group director. Mr Morley's supporters have

has not been taken seriously enough because Vickers pre- Rolls-Royce sports car.

sumed only a large car company could manage the long-term investment required to maintain the business

They have also attacked the role played in the negotiations by Rolls-Royce, the aero-engine manufacturer which formerly owned the car company. When it sold Rolls-Royce Motor Cars, it retained rights to withdraw the brand name if ownership moved outside the UK.

However, it has made clear from the outset that it would support a takeover by BMW.

BMW had an advantage because of a close working relationships with both companies; it supplies engines for the Rolls-Royce Silver Seraph car and has a joint venture with the aero-engine group.

Lazard Brothers, the investment bank handling the auction, also received approaches from a variety of interested parties, including several wealthy individuals, but none made it into the final round of bidding. Some, such as the private financier Douglas Llambias, are understood to be angry that they were not allowed to participate fully in the auction process or given proper access to Rolls-Royce

Vickers said the decision was based both on the value of the bids and on the ability of the company to put forward credible plans for long-term development of the company. This last condition is thought to have counted against financial bidders such as Doughty Hanson, which specialises in leveraged management buy-outs. Its normal mode of operation is to own a business for about five years before selling it.

Rolls-Royce is understood to have suffered from under-investment in the past and is thought to need investment of about £500m over the next five years. BMW will be expected to increase the speed with which new models are introduced and may also complained that their approach decide to expand the marque's range to include, for example, a

## Brussels plans crackdown on employment black economy

An assault on Europe's black economy is being planned within the European Commission amid estimates that up to 28m people are failing to declare jobs to tax authorities.

Padraig Flynn, EU employment commissioner, wants a campaign to take co-ordinated action. He part of plans to increase the quantity and quality of jobs. An unpublished document cir-

culated inside the Commission by Mr Flynn's employment directorate argues that jobs in the black economy harm the career prospects of those who do them and deprives states of receipts needed to provide social services.

The paper defines the black market as economic activity that is lawful in its nature but not notified to the public authorities. It says that such activity can be

cent of the EU's gross domestic product. That corresponds to between 10m and 28m jobs, or between 7 and 19 per cent of total declared employment. The figure was estimated at 5 per cent in the

Mr Flynn wants member states would like policy proposals included in revisions of employment guidelines to be made each year, following the Union's first summit devoted exclusively to tobs last November.

Undeclared work is concentrated in labour-intensive sectors with low profits such as agriculture, construction, retail, catering, and in modern innovative sectors. The paper suggests strengthening penalties against people found working in the black economy and reducing the

work. Options range from highlighting the "unsociable behaviour" associated with undeclared work to decreasing tax on income from labour. The proposed campaign will

cause controversy among memher states. Some may argue that black economy issues are best tackled individually. The employmajority of states would welcome an EU-wide initiative, since it would enable them to blame Brussels for potentially unpopular measures to crack down on tax evasion.

According to the paper, the biggest black economies are in Greece (29 to 35 per cent of GDP), Italy (20 to 26 per cent) and Belgium (12 to 21 per cent) while Finland has one of the lowest rates at 2 to 4 per cent. The UK black economy is estimated at 7 advantages of failing to declare to 13 per cent of GDP.

## IMF more vigilant after Asian failure

By Robert Chote in London

The International Monetary Fund is planning to step up its surveillance of countries' economic policies following an acrimonious internal review of its failure to predict the depth and breadth of Asia's financial crisis.

believes it should be more aggressive in demanding information from member countries. It wants to build its expertise in financial developments are better taken into account in discussions with members. But the Fund remains wary of revealing concerns about a country's policies in public and without its permission.

These conclusions emerge from an internal report on the run-up to the Asian crisis discussed by the IMF's executive board late last week. Described as "selfflagellating" by one official, it has nonetheless been criticised by some board members for playing down disagreements between departments. During the review, regional

departments and country desks have been accused by some offi-cials of "clientitis" - failing to raise problems because they are too close to national authorities. They in turn resent alleged "scapegoating" by the research department and the policy development and review department. "It has been an acrimonious and umpleasant debate," said one senior official. Some board mem-

bers would like to see more details of the exchange of views between departments, plus an external evaluation of the surveillance process. In Thailand, the report con-

cludes that "the Fund was clearly aware of the risks associated with the policies being pursued The global economic watchdog at an early stage, and before a consensus emerged among private market participants". But while rating agencies and

other commentators highlighted systems and ensure market corporate bankruptcies and banking fragility in Korea from early seem to have shared the extent of these concerns until the second half of 1997".

The report argues that the Fund should be ahead of the game. "Fund surveillance should presumably not only match, but exceed markets in identifying early warning signals, reflecting the privileged access that the Fund has to policymakers and information," it says.

The IMF's concerns were repeatedly made clear to the Thai authorities, but largely ignored. However, concerns about South Korea, evident in the IMF's internal financial sector analysis, were not raised to the same level of prominence - or communicated to the Korean authorities until very late in the process.

Personal view by the IMP's Stanley Fischer, Page 12 Global Investor, Page 12

## Pressure grows on Ciorbea

By Anatol Lleven

ruling coalition called at the weekend for the resignation of Victor Ciorbea, the embattled prime minister.

A conference of the National Liberal party declared that "what this three months ago by calling country needs now is a for Mr Ciorbea's resignation. strong government, able to take tough reformist steps".

This means that the prime minister is now supported only by his own party, the National Peasants, and to some extent by the UDMR, representing Romania's ethnic Hungarian minority.

According to Romanian officials, an International Monetary Fund team at the weekend expressed concern to Mr Ciorbea from Michel Camdessus, the IMF's managing director, about the effect the political crisis is having on reform. The IMF is worried about the slow pace of industrial restructuring. The Fund is also concerned about the fate of the budget presented by Mr Ciorbea to parliament last week. The budget's austerity measures are supposed to cut inflation from 150 per cent last year to 45 per cent this year, but thanks to tax and price rises inflation for the have shown the nationalists first three months alone is strongly increasing their believed to have reached support.

almost 20 per cent. As part of his effort to get the budget A second party in Romania's through, Mr Ciorbea last week promised additional spending on agriculture and the health service.

The other party in the coalition, the Democrats, began the political crisis blaming him for the faltering pace of economic reform. Since then, the splits in the government have brought reform almost to a halt. A new privatisation law was passed in February, but no further significant privatisations have taken place.

Even the leadership of the National Peasants party has agreed in principle that Mr Ciorbea should go. They say, however, that this should only be after the passage of the budget. They fear forming a new government could take weeks of political wrangling, delaying the budget almost indefinitely.

A nationalist leader, Vadim Tudor, said last week: "The only realistic solution is to shorten the population's suffering by organising early elections as soon as possible." All the other main parties oppose this, however, in part because opinion polls

majority in parliament. The threat of violence in

Ukraine's Crimea region receded yesterday as protests by the Crimean Tatar population against regional elections proved to be peaceful. Last veek, the Tatars, which accoun for more than 10 per cent of the

population of Crimea, threatened to blockade polling stations to protest their exclusion from the elections, or the basis that many of them have not received Ukrainian citizenship. Picture Reuters

### **Government of Pakistan** Privatisation Commission

## PRELIMINARY NOTICE

## PRIVATISATION OF THE KARACHI ELECTRIC SUPPLY CORPORATION

The Government of Pakistan ("GoP") through the Privatisation Commission intends to sell up to 51% of its equity interest in the Karachi Electric Supply Corporation ("KESC") to a strategic buyer who would also be given management control. The GoP has appointed the Union Bank of Switzerland as the financial advisor (the "Financial Advisor") for this

KESC is a vertically integrated utility and the monopoly supplier of power to Karachi (and certain adjoining areas) (the "Territory"), Pakistan's largest city and the country's commercial and financial capital. KESC has an installed generation capacity of 1,735 MW, transmission and distribution lines spanning over 15,561 km and 1,36 million customers.

Details of KESC's generation assets are provided below:

Plant Name	Installed Capacity (MW)	Available Capacity (MV	Fuel
Bin Qasim Power Station	1,260	1,110	Furnace Oil/Gas
Korangi Thermal Station	250	220	Furnace Oil/Gas
SITE Gas Turbine Station	125	72	Gas/HSDC
Korangi Gas Turbine Station	100	72	Gas/HSDC
Total	1,735	1,474	

KESC's transmission system spans over 993 km and mainly consists of overhead lines of which 20% are 220 kV. The distribution network, stretching 14,568 km, comprises 5,651 sub-stations (11kV) and pole-mounted transformers with a total

In December 1997, Pakistan's Parliament enacted an important pre-requisite for a clear and transparent regulatory environment: the Regulation of Generation, Transmission and Distribution of Electric Power Act, 1997. National Electric Power Regulatory Authority ("NEPRA") is the regulatory body constituted under this act.

The KESC privatisation represents an attractive investment opportunity in view of KESC's exclusive licence for the Territory and significant upside potential. Substantial cost savings can be achieved through the upgrading of power plants. transmission lines and distribution networks as well as the improvement of operational efficiencies.

Request for preliminary information on KESC by interested parties (companies and/or consortia) is hereby invited which should focus on and include brief details on the following criteria. Such requests must be submitted to the Financial Advisor (on the address/telefax number provided below) by close of business on April 10; 1998, either by mail or fax:

- 1. Experience in electric utility management in emerging markets;
- 2. Experience in international power development;
- 3. Involvement in the acquisition/operation of utilities requiring system upgrading and managerial restructuring;
- 4. Financial standing including disclosure of networth; and
- Details of ownership structure.

Request for Preliminary Information should include the name and address of the company and/or consortium, the date and place of incorporation (as relevant), and contact details. Parties that wish to receive preliminary information on KESC should immediately send details requested above to the Financial Advisor at:

## Differing views on Holocaust accord

**Swiss Banks** 90 days to agree Class action settlement

John Authers in New York

An agreement by three work towards an "honourable and moral" settlement of the issues raised by their controversial dealings with Nazi Germany during the second world war has been hailed as a "major breakthrough".

Banking observers regard it as a pragmatic response by Swiss banks to head off multibillion dollar class actions by Holocaust survivors which threaten to seriously disrupt their important US business.

The big three Swiss banks - Crédit Suisse, Union Bank of Switzerland and Swiss Bank Corporation - have been given three months to agree to a sizeable lump sum settlement of the US class actions by Holocaust survivors or face the renewed threat of sanctions on their important US business.

However, conversations with both sides in the dispute indicate that there are widely differing views of what was agreed in New Swiss banks to reach a "just, York and there is a good fair settlement". Mr Hevesi chance of several US states, said that it would involve including New York and California, imposing sanctions pensation" by the Swiss ther US class actions, on two of the world's top 10 banks which have been banks if substantial progress accused of financing the ities have indicated that to limit unnecessarily the is not made in bridging the Nazi war machine and him they expect any global settle- activities of companies trad-

will shortly unveil plans to accelerate the creation of pan-European risk capital markets along the lines of

the US. The Commission's proposals are being driven by the imminent launch of economic and monetary union. Brussels believes that the single currency will be a catalyst for consolidation among the 33 regulated stock markets in the European Union.

But officials are also draw ing inspiration from the US, where venture capital has spawned dozens of small companies generating millions of jobs - a critical con-cern in the EU, where more than 18m people are out of

work. A paper to be discussed by the Commission this week identifies several "pernicious" barriers to the growth of pan-European risk capital which it argues are stifling job creation. Proposals include a review of EU and national laws covering venture capital, national tax regimes, and the paucity of new high-technology companies. It calls for action at EU and national level.

 New EU legislation covering "closed end" funds which provide venture capital. This would allow venture capital funds to acquire critical mass by marketing their business in other member states.

A new "one passport" procedure for small and large companies which would mean that an offer document or prospectus approved in one EU country would be valid in another.

• Possible changes in the Investment Services directive to limit the discretion of host-country supervisors. The Commission suspects that local regulators are using business conduct rules

tial rules which would allow pension funds to invest more easily in risk capital and increase the proportion of pan-European equity.

 A review of accounting rules in the EU - with a long-term goal of encouraging moves toward common rules covering issues such as deferred taxation and pensions liabilities. This would increase the appeal of European equities for international investors, the Commission believes.

The Commission paper follows a request from EU leaders at last December's sumbehind with around 36 per mit in Luxembourg to report on the barriers to develop-Many Armenians are scepment of risk capital markets tical the elections will be EU finance ministers will any different from the 1996 discuss the paper next presidential elections and month in Luxembourg ahead parliamentary elections a of the EU summit in Cardiff year earlier, tainted by accuin June. **NEWS DIGEST** 

IMF AND INDONESIA

### Accord on \$3bn credit and rescheduling near

Indonesian officials yesterday said they had agreed with the International Monetary Fund on most issues standing in the way of a second tranche of \$3bn in stand-by credits and that the Fund had given the initial go-ahead for a scheme to reschedule some \$80bn in private foreign debt.

"The problem of foreign corporate debt is in fact very difficuit," said Ginanjar Karlasasmita, co-ordinating minister for the economy, before talks with Hubert Neiss, IMF director for Asia-Pacific. "Talks on the other four areas are mostly concluded," he added, referring to monetary policy, banking reforms, budgetary adjustments and structural reforms. "Only some details remain." IMF officials have not commented on much of the talks, but were cautiously positive over a government proposal for adapting a debt rescheduling method used in Mexico in 1983, Radius Prawiro, President Suharto's adviser on debts, said yesterday the Fund had already given its approval and was already discussing adap-

A likely bone of contention is the level of risk assumed by the government in offering dollars to corporations at a set exchange rate. Bank of Tokyo Mitsubishi has suggested shifting that risk to multilateral and bilateral donors, which would set up a fund of at least \$10bn. Sander Thoenes, Jakarta

HONG KONG BILL

## Dispute over legal exemptions

A political dispute flared in Hong Kong yesterday over government plans to enact a bill that could provide legal exemptions for Chinese state bodies. The bill would preserve a legal practice that existed under British colonial rule by transferring the privilege of exemption to the Hong Kong government and Chinese state bodies. But pro-democracy forces in the territory claim it could undermine the "one country, two systems" formula which underpinned last year's transfer of sovereignty and which promises Hong Kong a high degree of autonomy.

Under the bill, yet to be passed by legislators, the term "the State\* includes the Hong Kong government and representatives of China's executive authorities in the territory. This means Chinese official bodies, including Xinhua, the official Chinese news agency, would be exempted from the laws that do not specify a binding effect on the Crown. John Ridding, Hong Kong

PHILIPPINE ELECTION

### **Court rejects Marcos appeal**

Former Philippine first lady Imelda Marcos said at the weekend that the Supreme Court had rejected her appeal against conviction for graft and that she was certain to go to jail. Speaking at a a campaign rally, she said: "I was told that it is certain that before or Immediately after the Holy Week (next month), I will be jailed."

Mrs Marcos is one of 11 people running for president in the May election. Under election laws, a final judgment of conviction against her would automatically disqualify her from running for president or for any public office. A five-judge panel of the Supreme Court in January upheld a 1993 trial court's ruling sentencing Mrs Marcos to up to 12 years in jail. Mrs Marcos, in an appeal, said her case should be heard by the full bench and not merely by a court panel. Reuters, Manila

### ANDHRA PRADESH

### **Industry minister resigns**

The Industry minister of the southern Indian state of Andhra Pradesh yesterday resigned after his party supported a Hindu nationalist-led coalition in the nation's parliament. "In view of the fact that the Telegu Desam party has cast its vote in favour of the communal Sharatiya Janata party-led government at the centre, I regretfully announce my resignation from the council of ministers of Andhra Pradesh," Bashiruddin Babu Khan sald.

The 12 Telegu Desam lawmakers voted in favour of the BJP at the weekend, allowing it to win a vote of confidence in India's lower house of partiament, the Lok Sabha. Atal Beharl Vajpayee, prime minister and BJP leader, yesterday hinted that more parties might be included in his 18-member coalition government. Mr Valpayee thanked Chandra Babu Naidu, Telegu Desam leader, for supporting the BJP and its allies in the confidence vote.

Mr Khan said minorities and secular forces in the state of Andhra Pradesh had supported the Telegu Desam party for many years. "We feel shocked and betrayed, with the TDP casting its lot openly with the BJP," he said. Reuters, Hyderabad

**international monetary fund** internal report on asian turmoil says organisation must do more to predict potential crises

## Role of surveillance and transparency underlined

'Forewarned is forearmed". the International Monetary Fund argues in its internal post-mortem on the run-up

to the Asian financial crisis. The global economic watchdog concludes that it needs to do more to predict potential crises and to persuade national authorities to take corrective measures.

"Of course, some crises will continue to occur, and there should be no implication that by simply strengthening surveillance procedures the Fund could prevent all future crises," the report argues. "And Fund surveillance risks being ineffective unless members are willing to give full consideration to the views expressed by the international community through

The report identifies five preliminary lessons for crisis prevention:

☐ Collaboration and the provision of timely and transparent information by the authorities. Over the last two years the Fund has encouraged countries to provide more information to itself and the public. This should be extended to information on the short-term assets and liabilities of the government and private sectors, as well as financial sec-

The Fund should make it clear to members in annual "Article Four" consultations that they have a responsibility to provide information it carefully. needs for surveillance. This includes high frequency data on the true state of foreign exchange reserves. "At a minimum, any shortfall in this regard should be clearly noted, possibly publicly," the Fund argues. But it accepts that compiling timely and accurate data on short-term external debt is a daunting

The Fund should also make more use of thirdparty data and report systematically on market participants' views. The scope of the IMF's data dissemination standards should be extended and, to protect their integrity, subscribers' practices should be monitored and "instances of nonobservance handled firmly and expeditiously".

☐ The focus of surveillance needs to extend further and deeply beyond short-term macroeconomic issues. Developments in the banking sector, including the impact of over-extended property lending, the build-up of off-balance sheet liabilities and reliance on short term foreign currency borrowing made the Asian economies very vulnerable. "Effective surveillance will

of the functioning of the financial sector, at a much more detailed level than was previously required. The Fund will need to strengthen staff expertise, with implications for recruitment and

internal training." The experience of counmarket turbulence should be examined closely. The devel-

eral dialogues with member governments. This could be done "by improving the extent to which the available expertise on capital market tries with capital controls issues is disseminated that insulated them from within the Fund, which would both attune the staff and the board more to finanopment and stability of cial market developments 'The tension between the role of the

A **FINANCIAL ADVISER** FOR PRIVATE SECTOR PARTICIPATION/CONCESSIONING OUT OF AIRPORTS

**CONTRACTS & TENDERS** 

**Privatisation Commission** Government of Pakistan

The Government of Pakistan intends to involve Private Sector in the operations, in and maintenance of airports by concessioning out landside facilities at the airports run by the Civil Aviation Authority (CAA). A Financial Adviser is to be appointed to assist the Government of Pakistan in this process. The Financial Adviser will be responsible for all activities leading to the concessioning of airports and transfer of their management control to the private party. The responsibilities of Financial Adviser will, inter alia, include (at detailed due diligence review of present operations (physical, financial, technical, legal, institutional etc.), (b) advice on the structure of private sector participation/concession, (c) legal and contractual arrangements and the regulatory framework. (d) preparation and imple of the marketing plan, and (e) the conduct of the bidding process

Civil Aviation activities in Pakistan are regulated by CAA, an independent body, which was established under Pakistan Civil Aviation Authority Ordinance, 1982. There are 37 operating airports in Pakistan, including 7 international airports. Out of these airports, 19 airports are exclusively run by the CAA. At present total passenger and cargo traffic in Pakistan is over 14 million and 230,000 metric ton respectively. CAA is a profit making concern and it generated Rs. 441 million profit during the year 1997.

Expression of Interest (EOI) is invited from consortium comprising investment banks, aviation specialists, business houses and groups offering financial advisory services and consessing established credentials in similar activities. The EOI should include a brief profile of the applicant and a bank draft in favour of "Privatisation Commission, Government of Pakistan" in the amount of Pak Rs 50,000/- (or equivalent USS) on account of nonrefundable Processing Fee. Detailed Terms of Reference of the assignment will be provided to the parties submitting their EOL For further information, please contact Syed Anwar-ul-Hasan Bokhari, Project Manager at (92-51) 9222245.

sposals duly market "Financial Advisory Services for Airports" should reach the varisation Commission as the following address latest by 1500 hours (PST) on April 26, 1998.

# White House hits back at sex claims

By Bruce Clark in Washington

The White House counterattacked yesterday after lawyers for Paula Jones, the Arkansas woman who alleges sexual harassment by Bill Clinton, accused the president of withholding key documents and suggested, apparently without direct evidence, that he had once

committed rape. Robert Bennett, a lawyer for Mr Clinton, said the Jones camp was resorting to acts of "desperation by reckless and irresponsible lawyers who know they have a weak case" and had given their client bad advice.

The allegation of rape was contained in court papers submitted by attorneys for Ms Jones to the court in Little Rock, Arkansas which is due to consider her

Mr Bennett said the Jones team had recycled the rape allegation, involving an Arkansas nurse who has not been publicly named, in full knowledge that the alleged victim had rejected the story

under oath. "They know that [the woman] under oath has denied these allegations,"

port from the Clinton-haters" as they searched for to do so. ways to influence potential jurors and humiliate the

Papers submitted by the Jones team included a 1992 letter from Phillip David Yoakum, an acquaintance of which he apparently reminds her that she had once told him of being sexu-

ally assaulted by Mr Clinton. to newsmen accompanying reported to have chided the adviser Mr Emanuel in woman for changing her story about the incident occurred in 1978 during a case by searching for new conference of the Arkansas State Nursing Home

Rahm Emanuel, a presidential adviser, said yesterday it was "outrageous" that the Jones team had made use of this allegation when it had seen a sworn statement by the alleged victim which denied the charge.

While the rape allegation seemed hard to sustain, the presidential side faced a less sensational but perhaps trickier challenge in the form of accusations that Mr Clinton covered up documents relevant to the Jones

The documents in ques tion were letters from Kathleen Willey, a former White House volunteer who has alleged that Mr Clinton groped and fondled her. against her will, near the Oval Office in October 1993.

The White House has tried harassment lawsuit on May to counter Ms Willey's allespondence between her and the president which indicated that they remained on good terms - and she described herself as his "number one fan" - well after the alleged October 1993 incident.

But as the Jones team asserted over the weekend, presidential lawyers had initially denied the existence of He said his adversaries any such documents - and were using "financial sup- produced them only when it was tactically advantageous

When the White House was formally asked, two months ago, to "produce all documents concerning Kathleen Willey" the official response had been that "President Clinton has no the alleged rape victim, in documents responsive to this

While Mr Clinton declined to comment on these matters In his letter, Mr Yoakum is him on his African tour, his Washington claimed that the Jones camp was "trying to had allegedly camouflage the failure" of its material, however ill-

# Smart cards fail to impress American shoppers

John Authers reports on the results of a pilot programme in New York to test the acceptability of 'stored value' cards

whether smart cards costs. have a future in the the country reaches a conclusion this week.

Both Visa and MasterCard.

the two largest bank card associations, believe such cards will be crucial in their attempt to take a greater share of total transactions in the US. Both now say they regard cash and cheques as their greatest competitors. in the form of "stored value" cards will allow them access to smaller transactions at retailers which do not accept

credit or debit cards. Card industry executives accept that the existing technology, where cards with a and check balances. magnetic stripe make contact via a telephone link to this function, on its own, verify a transaction, is harder to dislodge in the US than in Europe or developing economies because of have been used, and many

The debate over low US telecommunications merchants remain reluctant to accept them.

But there are disagree-US is set to continue, even ments over what applicaas the most ambitious pilot tions of smart cards - which programme yet launched in can potentially carry far more information than a chips to existing bank cards magnetic strip - will finally and later deciding which persuade US consumers to

The pilot programme in Manhattan's Upper West Side over the last six months has tested one application. This is "stored value", where funds are loaded on to a clup, and then debited via a and believe that smart cards - terminal on a shop counter every time a purchase is made. Attractions, which the scheme's sponsors have widely advertised, include no need for pockets of change, greater speed, and the ability to keep receipts

> it now seems clear that will not be enough to entice shoppers to use the card. Only 10 per cent of the cards

Industry critics suggest that rolling out smart cards could have been done much more cheaply, by adding applications to offer.

of System B Division, a company which is developing identification systems for bank cards, refers to the "New York City disaster".

e said: "There's a real market for a direct move to smart cards in some lesser developed countries, like South Africa, where the bulk of the population is unbanked. But in the US there really aren't that many transactions which aren't covered by existing credit and debit cards.

According to Ron Brace, who has headed the project for Chase Manhatian Bank: in itself help to address the "Stored value isn't going to problem of training for mer-

move the majority of con- chants and their cashiers. We believe that can be accomplished through better ways to load the card, perhaps through the personal computer or telephone."

He also intends to offer consumers a choice of loyalty schemes, with each card accruing discounts at a particular retailers.

According to Carole Lockie, who runs the project for Visa: The extra reason to use the card will be a constant increase in convenience.

A key breakthrough here could be the planned extension of the card into the laundries run by apartment blocks in the area. Typically. one load of washing can require six quarters, and focus groups have found that many Upper West Siders esent the regular chore of collecting change.

increasing volume should

sumers. There's a need for According to Mr Braco: "A more value proposition in number of merchants who also pointing out to merorder to make that happen. felt it was not for them, or didn't see enough volume did drop out, but we are still. close to our target. There are device and how to activate it, particularly if volume is low. Higher volume will help

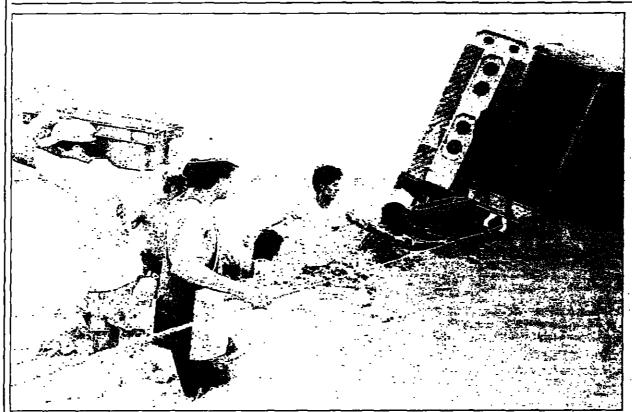

> s Lockie of Visa said: "We are asking merchants to do something new and different. We have barriers with these merchants, many of whom have never used a terminal of any kind before. And we have barriers of lan-

Measures to improve attractiveness to merchants include regular patrols", checking whether there are problems, and publishing "cheat sheets" in a range of different languages.

The software for the terminais has been improved dur-ing the pilot so that transacbanks behind the scheme are chants that the cards cut the risk of theft of cash.

But the banks running the scheme are not necessarily and there always will be aiming for big retailers. problems understanding a Large retailers such as the Barnes & Noble book chain and Tower Records, which both have a big presence in Joseph Wallace, a director allowing the possibility of traders over the learning the Upper West Side, are not currently involved in the scheme, and there may be little need for them as most purchases made there are large, and made with credit

> According to Richard Phillimore, in charge of smart card implementation for MasterCard: "Clearly we can't offer widespread acceptance yet, because this isn't a national implementation. The other thing is the relevance of the acceptance. We need to find the right merchant sectors, and the heartiand for stored value is really self-service, fest food and mass transit - anywhere

## Venezuela may create post of prime minister

By Raymond Colitt in Caracas

Venezuela's political parties are attempting to improve their bleak prospects through constitutional reforms, including a controversial proposal to create the post of prime minister.

When the idea was first mooted several years ago, the objective was to create a type of "superminister", who would take over some of the routine tasks of the president. Now, the traditional parties, which are still without any promising candidates of their own for December's presidential elections, have re-launched the proposal with an eye to weakening the powers of the presidency.

"They are seeking to tie the hands of the next president," said Friedrich Welsch. head of political studies at the Simon Bolivar University in Caracas.

The social Christian party, Copei, is expected to back a non-party candidate - irene Saez, former beauty queen and mayor of a Caracas borough. However, it hopes to vest the real power of government in a prime minister of its choice to be appointed by the president.

The social democratic party, AD, also without a popular candidate, favours a prime minister chosen by parliament, where it currently has the largest fac-

Critics say a prime minister backed by the legislature could lead to repeated clashes with the executive in a country accustomed to strong presidential leadership. "It could fracture the distribution of power and elevate the level of confrontation," said Angel Alvarez, professor of politics at the Central University in Caracas. "Raising the power of Congress could provoke crises of governability," especially because the future president is unlikely to have a clear majority in congress.

Another constitutional reform proposed by the leading parties - a second elec-toral round for all public offices - is also apparently based on short-term electoral interests: Publicly, its promoters say run-off elections would strengthen the mandate of elected officials.

Since 1979 no two consecutive elections in Venezuela have taken place within the same legislative framework.

## **Investors** shy from **Bolivian** changes

By Sally Bowen in La Paz

Foreign investors in Bolivia are growing concerned that free-market rules laid down by the previous administration could be overturned.

Plans for a new stock market law and modifications to the regulatory system are causing particular concern. The new law requires busi-

nesses to disclose information considered confidential by international standards. This requirement was added to the law at a late stage by the Bolivian senate. We bought into Bolivia

on a prior set of assumptions and assurances," said one foreign national. "Any threat of government interference would knock maybe 15 per cent off our eventual

The long-awaited securities law is urgently needed as framework for expected growth in capital markets.

Between 1995 and 1997, Bolivia's largest state-owned companies - in energy, telecommunications and transport - were privatised with 50 per cent of the shares being offered via public tender to foreign investors. The other 50 per cent remained in the hands of the Bolivian people, in a \$1.7bn fund administered by two Spanish-owned private pension fund managers. These shares

are still to be listed. Vice President Jorge Quiroga and Amparo Ballivian. vice-minister for investment. are aware of foreign investors' concerns, but the International Monetary Fund is pressing for the law to be promulgated by March 31. Ms Ballivian says she has "promised the law will be altered later in an extraordinary congress". Investors are not convinced.

The supposedly independent regulatory system, Sirese, often cited as a model for other newly liberalising countries, has been politicised, observers claim.

A string of draft laws has suggested modifications to Sirese, which now has a superintendent-general overseeing and acting as a secand level court for disputes. It now seems likely the superintendent-general will be replaced by a three-person body - fuelling fears of reduced transparency - and

at least one of its functions

transferred to the comptrol-

ler general's office.

## Panama rivals in party battle

Opposition candidates hoping to be Panama's next president were yesterday fighting the country's first ever primary election for their party's nomination.

Mireya Moscoso, the president of the Arnulfist party. is thought likely to repel a challenge by Alberto Vallarino, a businessman. The Arnulfist party is the largest in opposition to President Ernesto Pérez Balladares.

Although Panama's presidential elections are not until May 1999, the primary contest is being watched for clues to the chances of an opposition victory.

Opinion polls suggest Mr Pérez Balladares - who wants to run again, if reelection is approved in a referendum this year - would win over either candidate. being touted by some opposition leaders and analysts as offering more threat to Mr Perez Balladares and his ruling Democratic Revolutionary party than Mrs Moscoso. who lost the presidential

race in 1994. The winner of the Arnulfist party primary will try to lead an opposition coalition in the 1999 election, to prevent a repeat of the divisions of 1994 when Mr Perez Balladares was elected with only 33 per cent of the vote.

Mr Vallarino's supporters say Mrs Moscoso will again be unable to unite the opposition, though polls suggest she commands slightly more support in this respect.

Mr Vallarino's backers have criticised party leaders for holding the primary early, giving him little time to mount a campaign. They also denounced a decision to close party membership lists until after the primary. Mrs Moscoso said this week the decision to stop further enrolment was to prevent infiltration from supporters

of other parties. The Arnulfist party is named after Arnulfo Arias, a populist president deposed on several occasions, the last in 1968 when 21 years of military rule began. Mrs Mos-coso is his widow, while Mr Vallaring, nephew of Mr Arias' first wife, has also stressed family ties. Primaries are being held for the first time in Panama under changes made last year.

US PRESIDENT'S TOUR WASHINGTON SUMMIT PLANNED FOR LEADERS OF 'REFORMING ECONOMIES'

# Clinton seeks to step up Africa investment

in shoppers

President Bill Clinton announced further measures at the weekend to increase US investment and aid for Africa. However, his sixnation tour of the continent has so far been unable to produce any big new private investment deals and he remains locked in a dispute with South Africa over pro-

posed US trade legislation. Mr Clinton, who arrived in Botswana yesterday on the penultimate leg of his trip, told US and South African business executives in Johannesburg at the weekend that he would convene a Washington summit of the leaders of Africa's "reformwould be followed by regular meetings of finance and

Although Mr Clinton and his wife Hillary were accom-

panied by commerce officials and members of the business community, there has been little news of new contracts. Mr Clinton did say last week, however, that the US Defence Department would buy specialised South African vehicles for removing

Another problem for the US administration has been vigorous South African opposition to the proposed Africa Growth and Opportunity Act now before the US Congress. It provides for improved access to US markets for countries considered by Washington to be moving towards democracy and economic reform. South African leaders object to such conditions - although their own country meets the criteria and are likely to have reser-

vations on Mr Clinton's sum-

mit proposal for similar rea-

Mr Clinton also had to fend off suggestions that the US was abandoning aid to Africa in favour of trade. He said he was asking Congress to add \$30m to the \$700m in aid allocated for sub-Saharan Africa this year and was working to increase the annual level of US aid to the

record \$830m of 1992.

Trade cannot replace aid when there is still so much poverty, flooding, encroaching deserts, drought, violence, threatened food supplies, malaria, Aids and other diseases," he said. "A new partnership in trade and investment should not come at the expense of development assistance when it is so plainly still needed."

**UN AND IRAQ** 

## Site inspections going well, say diplomats

The first United Nations visits to Iraq's sensitive "presidential sites" have shown that both sides want to pass the biggest test of a crisis-breaking accord signed last month, diplomats said yesterday. They said tract officials and inspectors alike were flexible enough in recent days to prevent differences during the inspec-

tions from escalating into conflict. Most problems were resolved after brief discussions, say diplomets who under the terms of the February accord must accompany the UN Special Commission (Unscom) inspectors at the presidential sites. Diplomats say many of the problems have hinged on definitions of the precise boundaries of the presidential sites, which were mapped out hastily by UN surveyors at the

height of the crisis last month. Unscom inspectors who have been overseeing the elimin of Iraq's weapons of mass destruction had been barred from entering the eight presidential sites where they thought Iraq could have concealed material related to banned weapons programmes, Reuters, Baghdad

**EUROPEAN MONETARY UNION** 

## **Bavarian PM signals support**

Bavaria's regional government would support the introduction of the European single currency next year, Edmund Stoiber, the state's influential prime minister said. The state government led by Mr Stoiber who has been one of the flercest critics of the euro, dropped its resistance to the single currency at a special

cabinet meeting at the weekend. The move follows publication on Friday of a report by the Bundesbank highlighting "serious concern" on countries' preparedness for monetary union. The German central bank never theless supported as "justifiable" Introduction of the single currency next year. Mr Stoiber said the Bavarian government agreed with the Bundesbank's judgment. His support for the single currency may now ease friction expected in the parliamentary

approval process. German MPs are due to begin discussion of the convergence reports on Thursday. Graham Bowley, Frankfurt Economics Notebook, Page 12

**BULGARIAN NUCLEAR POWER** 

### \$300m modernisation plan

Bulgaria has announced a \$300m modernisation plan for two nuclear power units at the Kozloduhy plant, but has backed down on a pledge to shut down two older units by the end of the year. wan Shilyashki, chairman of the state energy committee, said that an international consortium led by Germany's Siemens group would prepare a modernisation plan for units 5 and 6 at Kozloduhy near the Danube river. The consortium also includes

Framatome of France and Russian companies. Westinghouse of the US will provide equipment for the modemisation. Mr Shilyashki said the companies would provide financing through commercial loans, which would be guaranteed by the Bulgarian government. Bulgaria agreed to shut down units and 2 by the end of 1998 under the terms of an Ecu24m (\$26m) loan from the European Bank for Reconstruction and Development for rehabilitating the four older units. However, Mr Shilyashky said the four units would "have to remain in service until 2004 or 2005, when the modernisation of units 5 and 6 is due to be completed. ## **Proposals to modernise** Chancellor is warned parliament abandoned on 'junior' market

By Liam Halligan, Political Correspondent

The Labour party's plans for significant modernisation of the House of Commons have been abandoned after intervention by Tony Blair, the prime minister, to prevent the Victorian splendour of the state opening of parliament being scaled down.

Proposals have also been rejected to recast the Commons debating chamber as a "horseshoe". However, senior party managers agreed that many of parliament's more arcane procedures could be used to tactical advantage. Modification of the traditional face-to-face seating has been under consideration by the Commons modernisation committee. Ann Taylor, leader of the House and committee chairman, has been keen to adopt the semi-circle used

in most modern legislatures. But senior ministers have decided to retain the existing adversarial format, arguing that over-crowding on the

government benches is due only to Labour's unusually large 178-seat majority. Mrs Taylor - described by one leading Conservative MP as "blissfully unaware of the historic dignity and importance of her office" - has

had many of her modernisa-

tion plans rejected by more senior government members. The move will also disappoint Liberal Democrats, who share the opposition benches with the Conserva-

tives. Ulster Unionists and minor parties. "We discussed the horseshoe proposal with Labour thoroughly," said one Liberal Democrat. "They had agreed it would induce a less hostile atmosphere." Mr Blair has insisted that the Queen's Speech - which

outlines the government's legislative programme – and all aspects of the related ceremony, must be kept. "It's not pompous," a cabinet minister said. "Tony likes the ceremony and the tourists also enjoy it."

Plans to adopt push-button voting at Westminster, also promoted by Mrs Taylor, have similarly been abandoned, despite widespread complaints that the existing practice of MPs walking through voting lobbies wastes time and makes for late-night sittings.

"We've killed the idea," said the minister. "The lobbies have worked for years and they give MPs access to ministers and to each other."

Mrs Taylor's plans to strip Commons attendants of their historic costumes including powdered wigs. buckled shoes and swords have also been dropped.

By James Mackintosh

The Stock Exchange has warned Gordon Brown, the chancellor of the exchequer that tax changes in the Budget could damage Aim, the iunior market. In a letter to the Treasury it said a third of companies listed on Aim could face liquidity problems after a clampdown on tax breaks for private investors. who dominate the market.

The intervention of the exchange is a boost for the growing lobby calling on the government to back out of the changes and leave the tax break - reinvestment relief - as it is.

The relief allows wealthy investors to defer capital gains tax by buying shares in certain companies, with about 30 per cent of Aim companies qualifying. But Budget changes designed to funnel investment into the but below the £75m or so

smallest, most risky businesses will limit relief to to move to the main market new issues of shares in comnanies with assets of less than £10m. The exchange fears this could lead to a loss of liquidity as private investors ahandon Aim and head for safe blue chips.

The exchange has asked for a meeting with Treasury officials to explain its position. It hopes to bring competing investment houses specialising in the area, a general share price drop. including Close Brothers and Singer & Friedlander, to lobby Whitehall. The British Venture Capi-

tal Association, which represents institutional funds and venture capital trusts, said it would also be pressing the government to leave the rules on qualifying companies unchanged. Analysts believe compa-

market capitalisation needed will suffer. Share prices of certain qualifying companies have been pushed up by a rush to take advantage of the tax break before the end of the tax year, they said. David Porter, an Aim analyst at Rest Investment, said some would fall back as a result, but the main effect of the tax changes would be a loss of liquidity rather than

David Poole, a director of Singer & Friedlander, said turnover in qualifying companies could fall significantly if the government did not back down. It seems the government may have made an unwitting mistake." he said. "Does this government favour an active secondary market for companies that haven't quite got the comph nies above the £10m limit to make it to the main market, or does it not?"

### NEWS DIGEST

LABOUR PARTY DONATIONS

## **Opposition pressures PM** over leaked document

The prime minister's links with big business were called into further question by opposition Conservatives yesterday, after a leaked Labour party document suggested that party donors should have regular access to Number 10 Downing Street, the prime minister's London office.

The paper, written by a member of Labour's fundraising team, proposed that Number 10 and Tony Blair could be used to attract potential big donors and help raise more than £15m (\$25m) by 2002. The document was dismissed by Labour officials as a discarded draft, but it was seized upon by the Conservatives, who claimed it was proof that Mr Blair was prepared to abuse his office in the interests of party fundraising.

David Heathcoat-Amory, shadow Treasury chief minister, said he would be writing to the cabinet secretary, asking for an investigetion. The document rekindled the controversy about Mr Blair's dionship with senior business leaders who have helped the

Labour government. Last year. Mr Blair was embarrassed by the disclosure of a £1m donation from Bernie Ecclestone, the Formula One chief, and last week he had to fend off criticism that he gave preferential help to Rupert Murdoch, the media tycoon wrices Sun newspaper has recently become a convert to the Labour cause.

Senior Labour figures were quick to dismiss the fundraising document as the work of a relatively junior member of staff, which had quickly been ditched. George Parker, London

### TRUCK DISPUTE COMPENSATION

### **Hauliers' payments welcomed**

The prime minister's office yesterday walcomed news that British hauliers have made a breakthrough in their 18-month battle for compensation, arising from the bitter French truck disputes in 1996 and 1997. An initial payment to 149 hautiers has been approved, and all other companies that previously had claims rejected are being encouraged to submit fresh applications.

it is thought the hautiers are being offered about £200 (\$334) per vehicle for each day of the blockade, which strangled freight traffic in November 1996 and in a shorter dispute in November 1997. Tony Blair, the prime minister, raised his concern about the delayed compensation payments with Lionel Jospin, his French counterpart, in Paris last week. The subject was also raised at the recent London "summit" between Tony Blair and Jacques Chirac, the French president. More than 1,000 British truck drivers were trapped in the two disputes. They have accused the French govemment of dragging its heets in settling their claims for compensation, which exceed \$1.5m. George Graham, London

### **CONSERVATIVE PARTY**

### Leader admits wage dilemma

Wiffiam Hague, the leader of the opposition Conservative party, vesterday said a Conservative government might not scrap the proposed national minimum wage, despite insisting that it could lead to job losses.

Mr Hague said his party would continue to oppose the government's proposals, but admitted they might be forced to live with the minimum wage once it had been established. Senior party officiels admit it would be hard to fight the next election with a pledge to take away from low-paid workers their newly increased wages. Mr Hague said the Tories would assess the impact of the minimum wage on the economy, before deciding what stance to

Mr Hague was speaking in the aftermath of a successful Conservative Central Council conference in Harrogate, Yorkshire, in which 96 per cent of the party backed his package to reform party democracy. The reforms, which give party members a dates, also create a national membership list for the first time.

Mr Hague set the party the ambitious target of doubling its membership from 330,000 in just two years, adding that one-half of all new members should be younger than him; last week he celebrated his 37th birthday. George Parker, London

### DEBIT CARDS

### 'Plastic' spending up by 276%

Francs, D-Marks and Lira will soon be replaced with euros. But the Briton abroad already has a universal currency: the plastic card. According to figures from Europay, owner of MasterCard. the amount spent outside Britain using UK debit cards shot up 276 per cent last year.

The trend towards plastic has long been evident in this country but resistance to foreign use and problems with compatibility of cards has seen the overseas market for UK cards grow more slowly. However, an increasing number of retailers accepting cards combined with the lower cost of currency conversion when paying with plastic is removing the barriers to foreign use. Banks and Europay have also been promoting the "security and convenience" of using a card abroad.

John Bushby, Europay's UK manager, said much of the growth came from cash machines abroad, with cardholders withdrawing money as they needed it "rather than carrying huge amounts of cash around with them". James Mackintosh, London

# Chip off the old building block

The Japanese property bubble may have burst but the billionaire is putting ther has succeeded in finding his money on an upturn, write Paul Abrahams and Gillian Tett

Minoru Mori was once, has already begun on Mori Build-Minoru Mori was oute, along with his brother Akira, the third richest man in the world. Their sprawling \$13bn (£8bn) Tokyo property empire propelled the two Japanese brothers to the heights of Fortune magazine's 1993 list of the world's wealthiest people. They were tucked in just behind the Sultan of Brunei and the

Mars family. The Mori brothers are poorer now. Last year, they were listed in only 42nd place on Forbes' list, owning net assets of - by their previous standards - a miserable \$5.2hn.

Their relative fall from grace was sealed by the 70 per cent collapse in the value of the Tokyo property market after the bubble economy burst.

But Mr Mori, a vigorouslooking 63-year-old with a taste for hand tailored English suits, is undeterred. His company, Mori Building, remains Japan's third largest developer. Against the odds, he has continued to make a profit throughout the slump.

Now, in spite of Japan's recession, he is predicting an upturn in the Tokyo property market. On the seventh floor of his head-quarters in Ark Mori building, not far from the heart of the Roppongi night-life district, he is lay-

ing out his recovery strategy. "I want to double my rental income by the year 2002," he

He is putting his money where his mouth is. The Mori group consisting of Mori Building and about 18 associated companies has spent Y300bn (£1.4bn) on land in central Tokyo. These companies are investing a further Y430bn to develop seven sites, including Y250bn on a huge complex in Roppongi's prestigious six chome (district). This year, the groups are expected to invest as much as Y180bn in Tokyo developments.

His ambitions are not limited

ing's 95-storey tower in Shanghai, which will be the world's tallest building - bigger than the Sears Tower in Chicago and the Petronas Towers in Kuala Lumpur. It is an audacious gamble, apparently at odds with Mori Building's traditional

conservatism. Mr Mori has a lot to live up to. His father, the late Taikichiro Mori, who built up the business, had a middle-class upbringing. Taikichiro's father had been a rice merchant who owned about 30 properties in Tokyo, Although Taikichiro had managed this modest property portfolio part-time while working as an academic, he only really began building the business after 1959

when, at the age of 55, he retired "Yokohama, Chiba and Kawa-He is also investing in China. Work has already begun on Mori Building's 95-storey tower in Shanghai, which will be the world's tallest building

from his job as head of economics at Yokohama City University. Over the next 33 years, through his skill in collecting more than 80 office buildings, mostly in Tokyo's prestigious Minato ward, Taikichiro became known as the "landlord of Tokyo".

Despite the huge wealth he amassed, Taikichiro maintained a modest lifestyle, neither smoking nor drinking. He wore traditional Japanese clothes and, until the late 1970s, lived in what he described as a cold and draughty house. In short, he refused to change his spending habits from those of a university professor.

Minoru Mori, by contrast, has developed expensive tastes. He is the world's largest owner of Corbusier paintings, with, he says, a "a collection bigger than that of London's Tate Gallery". If he is to maintain such a life-

to Japan. He is also investing, in style, Mr Mori - having weathspectacular style, in China. Work ered the worst property slump in

modern Japanese history - must show he has what it takes to grow the family business. He aims to do this by keeping rental revenues from his properties high, while keeping down construction and financing costs.

On the revenue side, the Mori empire continues to obey the traditional real estate tenet of "location, location, location". The new generation of Moris have not meddled with their father's tactic of concentrating nearly all their buildings in Tokyo's Minato ward.

Mr Mori rather smugly points out that, while occupancy rates are rising in the three central wards of Minato, Chuo and Chivoda, elsewhere the Tokyo market remains weak.

saki were all quite popular during the bubble, but they are per-forming not at all well at the moment," he says. Naturally, he has no property in these districts. The Morl businesses have also been able to expand because of

their ability to convince owners of small parcels of land to sell. "It's a real problem. At one time there were 120m realtors in Japan. But owning these small sites did not bring value. You have to add them together," he says. A lack of local knowledge might make it difficult for US investors to exploit the present market, he believes.

"There are two types of American investor. Those that want to pick up non-performing loans with the aim of selling in five years. They want to get in and get out quick. Then there are those who want to acquire property and are looking for yield in the long term. Apparently nei-

anything satisfactory. Property with had loans tends to be too scattered, and it is difficult for foreigners to make a decent

the same thing.

"We've already concluded we're still talking with the Tate Gallery in London and the Pompidou Centre in Paris. The aim is that every one or two years they send us an exhibition." However, he dismisses any suggestion that he might donate his Corbusier

As for financing, last year Mori Building renegotiated a sizeable proportion (though less than half) of its Y450bm net debt. He also raises the possibility of using project financing. "Japanese financial institutions tend to be unwilling to lend against property. The Japanese have lost the financial strength to develop

sites for themselves," he says.

Mr Mori has local expertise, relatively high-yielding properties and low financing costs. Yet doubts persist. The scale of his expansion is breathtaking and the dangers of developing so many sites simultaneously, especially in high risk areas such as

China, are very real.

Mr Mori admits the market in Shanghai is depressed, although he says this does not apply to quality commercial space.

"When the Empire State Build-

return on them."

Once he has collated and developed his sites, Mr Mori maintains relatively high rentals from his properties by constructing high quality buildings, designed to resist Japan's severest earthquakes. He adds further value by incorporating cultural elements. At the Roppongi six chome com-plex, for example, he is planning an art gallery. "By placing the Suntory concert hall near our Ark Hills headquarters we created a cultural district. With the Roppongi six-chome site we'll do

negotiations with the New York Museum of Modern Art, and collection to the museum.

ing was finished during the depression in the 1930s it was called the Empty State Building. I just hope it won't be like that."

### THE ESSENTIAL GUIDE TO MINORU MORI

Minoru Mon was not born with a silver spoon in his mouth.

His father was an academic and had some scattered land holdings in Tokyo that the university professor managed while not teaching

But by 1959, when Minoru graduated from the elite University of Tokyo, he decided that rather than work at one of the all-powerful ministries or big industrial conglomerates, he would join his father in his retirement lob - running the family property company.

At just 25, he became managing director of Mori Building. True to Japan's tradition of lifetime employment, he has never left the

Over the next 31 years, together with his father, he helped transform Akasaka-Roppongi nightiife district. Where they found wooden buildings and narrow roads, they left concrete sicvscrapers.

In doing so, they also generated a vast property company, with more than 80 buildings in the centre of the

As property prices rocketed in the 1980s, so too did the family fortune. At one point, it was estimated at \$13bn (£7.7bn), making his father the richest man in the world.

When his father died in January 1993. It was Minoru, then 58, rather than his older brother, who took over as president and chief executive. That was the wish of hi

He took over the company after the property market had peaked and was about to slide 70 per cent. But the conservative policies of the group allowed it to endure the downturn.

Now, Minoru is expending the Mori empire at breakneck speed, developing seven sites in central Tokyo and the world's tallest building, a Y75bn (£347m) tower in Shanghai that should be 460m high when completed.

When esked what it was like to be the son of the world's richest person. Minoru resconse was: "The richest man has to have cash. I have only

the remuneration committee, which is meant to decide according to If he is deemed to merit a bonus, he should take it. If not, then he shouldn't. Could it be that Lord

Alexander and Mr Wanless thought that their committee might actually recommend bonuses for them after such a gruesome year for the bank? The thought is a frightening one.

More likely, they were doing a bit of clever PR accepting the inevitable and making it look graceful. Simply to announce that the chairman and chief exec did not get bonuses underlines the fact that the company did badly. But to announce they have asked not to be considered for one makes it look as if they are doing

their bit for shareholders. If the UK way of allocating bonuses sometimes seems a little strange, then consider the US system. Green Tree Financial, a company that lends money against mobile last year's profits, after adopting a "less aggressive"

And how did the boss, Lawrence M. Coss, react to

this sorry state of affairs? He A big hurrah for Lord did the decent thing and gave the company back \$23m in bonus payments. Or was it decent? His original bonus was \$102m, so that still left him \$79m to play with. Here's a clever new way of padding out management books: leave blanks for

## Diesel, water and a secret ingredient

David Owen on Aquazole, a fuel that promises to make dirty, smelly buses a thing of the past

Everyone knows that oil and water do not mix. Diesel and water, however, is sel and water, however, is a different proposition - or so a product being developed by Elf under pressure to cut pollutant Aquitaine, the French oil group, appears to demonstrate.

Encouraged by the potential when diesel is mixed with water, for so-called "green" fuels as the two fluids start to separate environmental controls become within seconds. Elf scientists more stringent, Elf has come up with Aquazole, a diesel-based fuel containing about 13 per cent plain old tap water.

patents about two years ago, can improve air quality in urban areas by reducing pollution from buses and lorries. It says using Aquazole instead of ordinary diesel can cut nitrogen oxide emissions by up to 30 per cent, particulates by up to 50 per cent, and black smoke by up to 80 per cent, depending on the type of engine, its age and test conditions.

It also says such results can be obtained without technological changes to existing engines. "Aquazole can simply replace standard diesel," says Frédéric Barnaud, project manager.

Elf may have cracked a prob-

emissions from their vehicles. Under normal circumstances,

when diesel is mixed with water, maintain that with Aquazole which looks like milk, but smells like diesel - the emulsion remains stable for upwards of The company believes the prod-uct, for which it acquired the kept out of the light, this stabilthree months. As long as it is ity is said to be unimpaired in temperatures ranging from -20°C to 70°C.

The key to Aquazole lies in its third ingredient: an organic surfactant, whose identity is a closely guarded secret. Surfactants are molecules that facilitate mixing of liquids that do not normally mix by reducing their interface tension. The split personalities of the chemical world, surfactants have one end that is lipophilic (it likes fat) and one that is hydrophilic (it likes water). In this way, they literally bind the two fluids together.

For Aquazole, Elf had to find a fuel's water content means that a combustion chamber. Most diesel lem that has preoccupied scien- surfactant that would not pro- stronger biocide is needed cars are indirect injection, incor- says Mr Barnaud.

duce barmful exhaust emissions. So the chemical selected is nontoxic and non-metallic. Finally, as Elf scientist Philippe Schulz explains, it is non-ionic, meaning it is not sensitive to water

Also critical is the mixing process, designed to produce even distribution of small, uniformfor the liquid's stability. Mr Schulz says this has been achieved by a two-stage process in which water is broken down to the optimum size before mixing ing soot and particulate formawith diesel. "You need to get something that you can reproduce on an industrial scale," Mr Schulz adds. "The most difficult thing is getting from laboratory scale to industrial scale."

The final ingredient is a biocide to kill bacteria. The new

than with ordinary diesel. Emulsions such as Aquazole may cut the level of pollution from diesel engines largely because water reduces the temperature in the combustion chamber. The lower the temperature - Elf says it is 5 to 10 per cent lower than with standard diesel - the lower the level of sized water droplets - important nitrogen oxide emissions. At the same time, the company says, the sudden vaporisation of the water leads to better fuel dispersion in the combustion chamber, lower-

> These effects can be obtained, however, only in direct injection engines, where the water in the fuel is introduced direct into the

> tion. Water in the engine is also

said by Elf to improve thermo-

dynamic efficiency and reduce

carbon dioxide emissions.

porating a pre-chamber to ensure a good mix of fuel and air. That is one reason why Aquazole is not thought to be appropriate for diesel saloon cars.

Introducing water into fuel and engines - may also have its drawbacks: loss of power, corrosion, and the possibility that engines may billow steam - more environmentally acceptable than black smoke but still undesirable in busy town centres.

Elf argues that power loss should not be a problem in its preferred initial market - captive fleets of buses and municipal vehicles - as such vehicles are usually overpowered. It says tests have shown that its fuel causes neither corrosion nor steam problems. "You only have 10 per cent more water in the exhaust than would be produced with diesel alone, so it makes no difference,"

**TECHNOLOGY PILOT PROJECTS** 

## Price is the key

With Aquazole in the final stages of development and testing and Elf producing enough to supply about 1,000 buses, pilot projects are poised to become more widespread.

Elf's Mr Barnaud says Paris buses using the fuel should be on the road by May or June. The Régie Antonome des Transports Parisiens, the Paris regional transport authority, confirms it is participating with Elf in tests with Aquazole. Contact has also been made

with London Transport. Mr Barnaud says this may lead to Elf producing Aquazole in the UK using "city fuel", a low-sulphur diesel. London Transport emphasised contacts were at an early stage, however. "We would need to be convinced of the economic as well as environmental benefits of this fuel," it said. The longest-running pilot

scheme is in Chambery, in the east of France near the Alps, where three buses ran on Aqua-zole in 1995, before Elf became involved. That figure has risen to 30 of the 70-strong fleet. Daniel Abad, technical head of the city's bus service, is impressed by performance, talking of the immediate "extraordinary reduction in pollution" and simple use.

The only "difficult moments" he refers to involve a build-up of bacteria in the summer of 1995. But, he says, "we would have had the same problem with diesel". Elf says it has solved the problem by switching to a new biocide. A passing Chambéry bus driver also seemed satisfied with the paign with SNCF, the French rail fuel, although he remarked on

starting problems and poor acce eration soon after the product's introduction. Now, however, he has to look to check whether the vehicle he is driving is diesel or Aquazole. According to Mr Abad, "the success of this product would be

really total if it was the same price as diesel or cheaper". But he adds: "I think it would be a mistake to have a premium of more than 5 or 6 per cent".

With about 10 per cent more Aquazole than diesel needed to generate a given amount of power, and the process requiring an extra stage, that may be a tall order. So discussion of the fuel's fiscal regime may be significant. The company effectively argues that standard hydrocarbon taxes should not apply to the water content of the fuel. It is asking the French authorities to give consumers a financial incentive to use Aquazole instead of

diese). As for Aquazole's future amid the proliferation of "green" alternatives, Elios Pascual, general manager of Renault VI's bus unit believes it is "an excellent idea for the existing generation

of buses". The French bus and truck manufacturer is sufficiently confident of Aquazole's credentials to have extended its after-sales warranty to Renault vehicles running on Aquazole.

Other possible markets for the fuel seem likely to include dustbin lorries and diesel-engined locomotives. A joint test camoperator, is under way.

**INFORMATION TECHNOLOGY** ONLINE BANKING

## An attempt to cash in on internet commerce

John Authers explains why rival US banks decided to join forces to develop a transactions and payments infrastructure in cyberspace

described banks as "dinosaurs" in an interview four years ago, he set off alarm bells among take over banks' traditional business, by taking control of internet commerce.

TIM JACKSON ON THE WEB

## Simple directions from A to B

As the number of Web addresses increases, companies such as | as "Palo Alto real estate" Centraal are striving to create easier routes

The other day I heard an announcer on London's Classic FM radio station making a joke about Web ddresses - parodying, from the non-nerd's point of view, the incomprehensible dots, slashes and strings of strange combinations of www.'s and http's.

Beneath the jokes, which are a proliferating symbol of the Web's penetration into the media mainstream, is an important issue. For most people, finding a website by means of its URL (uniform resource locator or address) is becoming increasingly difficult. As the number of websites continues to proliferate, the choices become tougher. Is Prince.com the tennis racket company, or something entirely different?

Evidence of this difficulty can be seen in the site logs of many websites, which show that surprisingly few users come to their pages by actually typing in the address. More visitors come by following a link from a search engine or another site or from a bookmark.

That is why the idea behind Centraal (vouv.centraal.com), a company based in Palo Alto, California, is so brilliant. Instead of floundering among URLs, it has developed technology that allows you simply to type a

normal word or phrase into the address window of your browser. A piece of software called a resolver will then check the phrase you have typed against a database of commanies' URLs and send you where you want to go.

Better still, you can create "personal real names" – so if your favourite source of news is CNet, you can teach your browser to take you to CNet every time you type "news" into the address window. Centraal is the brainchild

of Keith Tears, a founder of one of Britain's first internet service providers. He had the idea in 1995 when setting up an ISP in France. In an attempt to get

owners of Minitel pages to open up on the Web, Mr Teare started thinking about a system that would allow customers to type into a Web browser the Minitel number they were already familiar with, instead of an unknown URL

By 1996 the idea had proadened into developing a "real names" system for the internet as a whole ~ and in November of that year, Mr Teare and a French partner incorporated in Delaware. The company was initially to be called Go; a welter of

threats from owners of competing trademarks persuaded it to think again. The company name of Centraal arose because of its business model.

Centraal hopes that its technology will not be distributed only by means of individual users downloading a software extension to the PC's operating system from its

In addition, it is trying to get search engines, directory listings and other main presences on the Web to act as distributors. The idea is that the technology should sit invisibly in the middle between the user and the technology they are familiar with ~ in a central position.

I do not fully understand the resolver/database technology, which uses the XML (eXtensible Markup Language, which is being touted as the next thing after HTML). But one feature of it is clear: its distributed architecture means that users need not hit the Centraal site every time they want to resolve a

real name What is interesting about Centraal is its business model. There are two revenue sources. One is that companies can register their real names in the database for a flat fee of \$40 (£24) a

To preserve the integrity of the service, companies will not be allowed to buy generic words such as "books" or to acquire the monopoly for businesses of their type in their area, such

Ultimately, Centraal reserves the right to decide which real names to allocate to which companies on the

basis of trying to guess what users looking for the website in question might reasonably type in. The other is that the company plans to approach between 100 and 200 of the most highly trafficked

websites, and squeeze then for extra revenue Centraal will point out to them bow many millions of bits its technology brings, and demand a 1-cent bounty for each visit generated. It will negotiate volumes of free traffic for each of these big sites that are related to the nature and profitability of their businesses.

Mr Teare expects Centraal to reach \$10m in sales in 1998, \$24m in 1999 and \$120m in 2000 - of which 60 per cent will come from this latter source. Far-fetched? No more than the average

internet start-up. Mr Teare has brought in funding from two respectable sources of finance - Draper Fisher, a leading Silicon Valley venture-capital fund, and IdeaLab Capital Partners, the fund associated with the IdeaLab business covered in this column last week

One should always be cynical about new businesses that rely for their success on getting huge numbers of hits. But this one might – just might –

CORPORATE

TRAVEL

DATA

DEPT.

ANALYSIS

# Charge card saves time and money

Amon Cohen finds out how Seagram cut \$15m from its corporate travel bill and did away with filling out reimbursement forms

average European business traveller spends 98 minutes each month filling in expense forms.

That figure presents no mental" part of that success, surprises to Jonathan Stobart, financial director of travel management at The American Express card, Seagram Company, the beverages and entertainment per cent of their travel and multinational. Seagram managed to reduce the time employees spend on claiming expenses by one-third through adopting a corporate charge card and an automated expense reimbursement system.

These innovations have also eliminated cash purchase and detail the advances and reduced the need for administrative personnel, meaning the cost of processing each expense claim has been cut by more than 60 per cent.

This is not the only reason management system. The card and automated reporting system also provide data on spending. Mr Stobart and than without a card' his six worldwide travel management colleagues have used the information to to negotiate better deals with suppliers and ensure

are working efficiently. The expenses system together with other steps taken by Seagram to overhaul its travel management, such as reducing the number

ing. Mr Stobart disagrees. "Cards provide a much more visible record of spending." A recent survey by of travel agents from more he says. "Abuse of expenses Visa International than 30 to two - has cut is therefore less likely than revealed that the \$15m from the company's without a card." travel bill in the year to

> their money. Mr Stobart says this process has improved the accuracy of his information from about 80 per cent to 95 per cent. Such information is vital for Seagram's analyses of its

> which suppliers they spend

costs per mile and for preparing itself for negotiations with vendors. It has also enabled the company to identify significant spending on routes not

covered by preferred airline

agreements. "Currently, 75 per cent of our air spend is covered by global agreements with five carriers," says Mr Stobart. 'We are looking to increase that figure to 90 per cent by adding a select number of

regional carriers. Preferred agreements give us greater savings, so every flight on a non-preferred carrier is a lost opportunity." Data warehousing is also

AH, MR. SANDERS!

\$250,000, 000,000

helping to secure discounts on last-minute flights booked with the Amex card at the airport. In such cases, even though the flight is with a preferred carrier, the traveller pays the full fare because he or she has not booked through the company travel agent. Matching of the card and agency data enable Seagram to claim the appropriate discount.

However, Mr Stobart feels that most important of all is the total picture given by data warehousing. For

instance, there are parts of the world where acceptance of the Amex card is poor, there are others where retained travel agents do not operate. For a multinational, with interests in diverse locations such as Opporto, Cognac, Florida and China, data warehousing allows Seagram to paint a truly global picture of its

expenditure. Setting up such a syste need not be particularly

Mr Stobart says it took only 10 weeks for international Software Products to merge Seagram's card and agency data. For savings of \$15m, it could be worth a

### Delta includes laptops in hand luggage limits

Travellers flying with Deltz, & US carrier, will soon have to count their beotops as part of a strict cabin baggage allowance. The uidine says ā will limit pessengers to two items and that computers will no longer be treated as exceptions. Meurice Worth, chief

operating officer, said discomfort, difficulties and delays" had resulted from we cany on beacage There wall be some eceptions to the two-bag rule

women's handbags, for example - but extres such as certier bacs full of duty-free goods, will be counted. The crackdown starts on April 15 and covers Delta Express flights

### Sabena battie

Belgium's Sabena joins battle with British Airways and British Midland on Sunday with flights between Brussels and Birminoham. It claims only about one-in-five passenge travelling the route switch to connecting services in the Belgian capital. With four round-trips a day from Monday to Friday and a reduced service .at weekends, Sabena reckons i can "double or maybe treble" the level of transfer traffic.

### Pacific gateway

Phoenix Sky Harbor Airport is pitching itself as the gateway to the US west coast since British Airways doubled capacity on the route from London Gatwick, writes Gillian Upton. As of yesterday, the DC-10 aircraft are superseded by a B747-400, which offers 401 seats instead of 214 and a daily service,

instead of six days a week. Phoenix is hoping to attract business travellers as the flight and time difference are one hour less then from London to Los Angeles, with less congestion, cheaper car rental and less chance of delay.

### Russian opening

Austrian Airfines is expending its services from Vienna to destinations in the former Societ Union, with connections between all European capitals. From today, it is starting a twice weekly service to Kharkiv in Ukraine. It also plans flights to Kresnoder in Pussia and Tolisi in Georgia in May.

### **New services**

Taiwanese strline EVA Air and Japan's Ali Nippon start daily code sharing services betw Taipei and Oseka on

### Manchester hotel

Manchester gets a stylish new 112-room hotel next month when the fourth property in the Malmaison group opens in Gore Street, Piccadilly, Like its predecessors - among them the Glasgow hotel, which is a former Greek Orthodox Church - it will occupy an old building. The hotel combines a converted warehouse with a modern, glass canopled development.

### Marriott expands

Marriott is to open hotels in China and Israel this year. The former is in the central business district of Shenzhen and will have 397 rooms and revolving top restaurant. The latter is on a hilitop overlooking the old city of Nezareth. The chain has also unveiled plans for a 180-room hotel in Mendoza, Argentina, due to open in 2000

The Control

Government of Pakistan Ministry of Petroleum & Natural Resources (Dept. of Petroleum & Energy Resources)

Islamabad, 27th March, 1998

AMENDMENT NOTICE TO THE EXPRESSION OF INTEREST (EOI) FOR THE WHITE OIL PIPELINE PROJECT PAKISTAN

Reference press advertisement issued in National dailies of 6th and 8th January and in Financial Times, London of 8th January, 1998 inviting EOI for the Gas oil/HSD Pipeline Project.

In partial modification to the EOI, the following changes are hereby notified in the said advertisement:

- i) The amount of refundable bid money has been increased from Rs.1 million to Rs.10 million.
- ii) In addition to the first right of supply of product up to a maximum quantity for each year as specified in the Information Memorandum, a minimum throughput guarantee of 3 million tons per annum will be available for first eight years of operations.
- iii) The value and validity of the Performance Bond has been revised from \$70 million as under:
  - a) US\$ 30 million till financial close;
  - b) US\$ 15 million from financial close till one year from the date of successful commissioning.
- iv) PARCO Pipeline existing Right of Way from KP 415 to KP 755 approximately will be made available to the successful bidder/sponsor based on mutually acceptable commercial terms and conditions between PARCO and the sponsor. For balance ROW along with requisite land for pumping station, storages etc. Government will undertake facilitating the timely acquisition of the same.
- The trial and formal commissioning dates have been revised to 30th June 2000 and 31st July 2000 respectively.
- vi) Best efforts will be made by the prospective bidder to utilise locally manufactured/available linepipe, machinery and equipment meeting comparable specifications,
- vii) The last date for submission of bid has been extended until 30th April 1998. Six copies of the complete bid

JOHN RIDDING FILE FROM HONG KONG

## Bright lights illuminate an identity crisis The world-renowned immigrant society is suffering growing problems among

new settlers that have left some feeling like second-class citizens Bright lights, big city. But for mainland arrivals. They are the in the border town of Shenzhen many heading south across the

may seem, but one of the world's most successful immigrant societies has a problem with immigration. In the nine months since Hong Kong's return to China, such worries have been drowned out by applause for the territory's smooth political transition. But the hoopla of the handover and the rhetoric of reunification are lost on many

migrants. For all the talk of

border, Hong Kong's allure is

proving deceptive. Surprising it

two systems", some feel like second class citizens. "There are problems, very serious problems, I am afraid," says Tsang Yok-sing, leader of the Democratic Alliance for the Betterment of Hong Kong, the biggest pro-Beijing political party. Disillusioned immigrants, resistance from local residents, and the worst economic downturn since the early 1980s create a

Chinese identity and "one country,

formula for friction, he believes. From chicken flu to kidnappings and pressures on schools, callers to radio phone-in shows have pinned the blame for society's woes on

usual suspects in many of the territory's crimes. One mainlander was even assaulted by a Buddhist monk, infuriated by an alleged breach of his begging space. There are several strands to the

strains. While many high-rollers and professionals have moved down from the north, slipping seamlessly into the territory's social elite, most recent immigrants have come from the lower ranks of mainland life. "They have real difficulty in finding jobs and housing when they reach Hong Kong," says Sze Lai Shan at the Society for Community Organisation.

A SOCO study showed immigrant families live off an average of HK\$7,000-HK\$9,000 a month (£539-£693), about half the median family income. Given the long queues for public housing, a big chunk of that often goes on cramped private apartments. Poor immigrants who fight their way up are, of course, part of Hong Kong's success. Li Ka-shing built his corporate empire on

determination instilled while

t in the second of the second

sweeping floors as an apprentice.

Wong Kwan cleaned cattle trains

before rising to riches as a property tycoon. But those in the latest influx frequently face different prospects. Many are women married to

Hong Kong men who found it difficult to find a wife at home. Often marriages of convenience, these relationships suffer strains when the women and their children make the journey south. "We are getting more and more cases involving immigrant wives," says Thomas Mulvey, director of the Hong Kong Family Welfare Society. The sheer numbers of potential

immigrants scares local residents. While 150 immigrants are allowed to enter Hong Kong legally every day, compared with the quota of 105 in 1995, there is still a huge backlog of applicants. An estimated 66,000 children from divided families are waiting in China to join parents in Hong Kong. In a bid to stem the tide, the Hong Kong government has introduced administrative measures. But it is facing a tough legal battle against families claiming the right of abode for

It is a measure of local attitudes that emotive newspaper pictures of children and their mothers being vanked from apartments appear to have made little impression, "What people see is the threat to resources in education and housing, not the children," says Ms Sze. The ongoing legal battle, which looks set to reach the court

of final appeal, has fuelled fears of

a massive human influx.

"I suppose we have an image of mainlanders as greedy or lazy," admits one Hong Kong citizen. She cites the stereotype of Ah Chan, a television character from several years ago, who shuffled around in pyjamas and reinforced the image of hayseed cousins. Despite bursts of brotherly identity, most evident in the aftermath of the Tiananmen Square massacre, such prejudice remains. Dai Luk Jai - a colloquial

air of contempt. Mainlanders have their own axe to grind. "The reality is different to the dream," says Lam Pui-shan, a student from China. "I asked my parents why we were not emigrating to Canada or somewhere else. They told me that Hong Kong was a beautiful

term for mainlanders - carries an

"We are all part of China, so why do they think they are better than "black societies".

prosperous place."

us," asks Mrs Lau, a recent arrival who has so far failed to find work. "I have met many of these new immigrants and they resent being discriminated against," adds Mr Tsang. "The government must do more to defuse the tension."

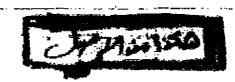

gencies have been doing more. The Home Affairs department and the Jockey Club, the territory's biggest charity, are funding welfare programmes to help immigrants adjust. Mr Mulvey's society, for instance, has received HK\$6m for one of these projects.

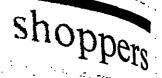

But some believe it may be too

The government and social

little too late. "We knew from the mid-1980s that there would be more immigrants, that people from the mainland would have rights and their children would have rights." says one welfare officer. "No one really thought through how they could be accommodated." The big concern, says Mr

Mulvey, is the fate of younger migrants, "With adolescents coming in to join a parent they don't really know and with problems fitting in at school, they are going to provide ripe pickings for the Triads," he warns. The worry is that the latest wave could produce fewer Li Ka-shings and more members of Hong Kong's

VIARCH 30 log

# Classical music and all that jazz

Andrew Clark talks to the composer Mark-Anthony Tumage

There is sex and swearing in contemptuously about Tony Greek, furious intensity in Three Blair's government and Britpop. Screaming Popes, propulsive rage in Drowned Out. Titles like Dispelling the Fears and Blood on the Floor suggest something equally disturbed. That is why London's South Bank Centre has called its Mark-Anthony Turnage retrospective "Fractured Lives"

Turnage's thrillingly abrasive orchestral writing and bluesy harmonic idiom may give his music strong urban overtones, but to categorise it as aggressive and in-your-face would be missing the point. Turnage, 37, is far too versatile a composer to be pigeon-holed. Listen to the thoughtful undertones of Your Rockaby, the achingly beautiful cadences of Troice Through the who makes the worlds of modern use them as his laboratory. and popular music swirl together and become inextricable, whose creative palette is infinitely flexible but never less than personal. Turnage's output in the 10 years

He makes the worlds of modern and popular music swirl together

since Greek shows he is not just a dextrous technician, but one of the most creatively unfettered voices of his generation.

So don't be put off by the poster for "Fractured Lives", which makes Turnage look like a criminal. The man who opens the door to his studio in north London turns out to be warm, open-minded and blokeish. He admits he initially cultivated the rough tough image reflected in Greek and he still draws inspiration from the tortuous paintings of Francis Bacon (an exhibition of which, at the Hayward Gallery, happily coincides with the Turnage retrospective). But in his private life as much as in his music, Turnage has mellowed. Get him talking about his two boys, the youngest barely six to detect where symphonic solidweeks old, and he's really quite a

Of course, there is a hard core

way he structures his day, leaving home at six every morning to notch up seven hours at his work desk. You detect it when he talks It's unmistakable when he recalls severing links with his Pentecostalist parents: he feels the religious influence at home was partly responsible for his brother's suicide. And it's manifest in his rigorous self-criticism. He readily admits having had a lot Reality is somewhat friendlier. of help from fellow-composers Oliver Knussen and Colin Matthews, to whom he still shows his

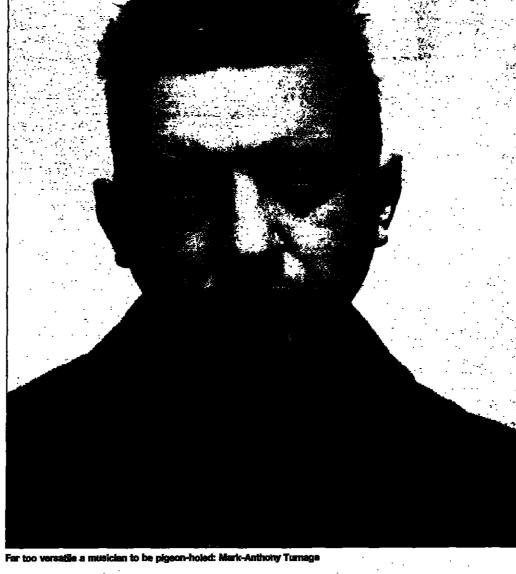

What distinguishes Turnage's mature output is that it is all so playable. You could say he was incredibly lucky to land composer-residencies with the City of Birmingham Symphony Orchestra (1990-94) and English National Opera (from 1995) - two of the most forward-thinking Heart, the cabaret textures of musical institutions in the UK, Momentum: here is a composer which have encouraged him to

In fact, luck was a very small part of it - though don't say that to some of Turnage's deeply envious and less talented colleagues. He had the imagination in the first place, but he also deserves credit for realising what illustrious predecessors took for granted - that there is no greater creative stimulus than writing for someone with a special talent. This way of working resulted in an

increasingly refined body of orchestral scores during his CBSO residency, and it is informing every detail of The Silver Tassie, a full-length opera that is being workshopped at ENO prior to its premiere there in 2000. Turnage's collaborative instincts explain why Blood on the Floor, created for US jazz

musician John Scofield and the classically innovative Ensemble Modern, is so insidiously effective; why he wants to write a violin concerto for Nigel Kennedy, why he would like to work with Bryn Terfel and Keith Jarrett. They all share his belief that the distinction between high and low art is spurious.

Turnage can suffuse his music with jazz as effectively as any American composer, while retaining a lyricism rooted in English tradition. Indeed, it's impossible ity gives way to swing, so easily assimilated are the influences and so skilful his use of saxo-

lems when the idiom demands a shock. flexibility for which classical musicians have not been trained. Turnage summarises the dilemma: "If you write it all down, can you get them to play it as if they were conversant with jazz? It has a lot to do with phrasing, with ghost notes - you can have a note that's almost not there, but it infuses the rhythmic sense. It's notated, but in brackets. If you play it like a classical musician, it doesn't make sense."

The problem works both ways. Turnage found himself overnotating the part for jazz drummer Peter Erskine in Blood on the Floor. "He said it was ludicrous, it restricted him too much. That's a contemporary music thing - it comes from the Second Viennese School. You become obsessed with what things look like on the page, rather than what they sound like. At one point, I would feel I hadn't done my job properly if there wasn't an accent, a dot or a dynamic on each note. It just looked bare. It took me a long time to stick to fundamen-

- four straight measures in

phone, percussion and guitar. 4/4 time, with four straight overcomes all the main charac-

But there is nothing shocking about Turnage's sound-world, partly because he is such an accomplished funesmith. He says instrumental melodies come naturally, "and anything slow. That's a very late 20th century problem - I find it hard to write fast music, and it's even worse trying to write for voice. I didn't hear much vocal music when I was a kid. I'd much rather write for soprano saxophone, because it makes me feel I'm imitating the

human voice." Perhaps The Silver Tussie will help him resolve that particular hang-up. It is based on Sean O'Casey's play about the athletic. charlsmatic Harry who goes off to war and returns embittered in a wheelchair. The scene which seized Turnage's imagination was the chanting in the trenches - "I was in the library and opened the page at these incredibly expressignistic lines."

As part of his research. Turnage visited the Somme. He says his biggest challenges will be to reflect the transformation that

But there are practical prob- crotchets. That was a culture ters as the story unfolds, and to | fails and leaves him genitally prevent the action degenerating into an operatic version of Oh! What a Lovely War. After The Silver Tussie, Turnage wants to turn his energies away from the theatre.

He does not deny, however, that opera was the making of him: Greek brought notoriety and financial security. It winds up the South Bank retrospective in a staging by Clare Venables, and has its US premiere this summer at Aspen. At the time of its last UK performances at ENO in 1990. Greek was interpreted as a reaction to the Thatcherite 1980s. How will it look now? Turnage reacts with a mixture of curiosity and scepticism. "It's the same with all my pieces - I like some bits, and dislike others. I hope time will have revealed something more in it. The anger is still in the piece, even if other emotions have taken its place in

"Fractured Lives". April 3-18 at the South Bank Centre, London (017) 960 4242). A recording of Blood on the Floor" is released on Argo today.

## Glam rock and cocktails find the right space

NEW YORK THEATRE

**BRENDAN LEMON** Hedwig and the Angry Inch Cabaret

John Cameron Mitchell is ahead of the curve. While other sifters of 1970s pop-culture detritus have been busy with the disco years. Mitchell, a young, gifted American actor, decided to focus on one of the decade's less picked-over styles, glam rock. His timing is impeccable. By the time the epic, early-70's movie Velvet Goldmine is released this autumn, everyone will probably be sick of this style; but for now, if Hedwig and the Angry Inch, the show written by and starring Mitchell and now playing in downtown Manhattan, is any indication, few eras of overripe chic feel fresher than the one associated with T. Rex and early David Bowie.

Mitchell's Hedwig begins life as a self-described "slip of a girly boy from East Berlin". A lonely and confused child, he is happy only when listening to the top of the pops tunes beamed over the Wall by American Forces radio, music such an anathema to his mother that in their cramped flat the boy can listen to it safely only with his head shoved in the kitchen oven. In his early 20s, he falls in love with an American corporal and, to prove his love, has a sex-change operation which with the "angry inch" of the title.

Two years later, however, he is alone again, living in Kansas and has taken up with a grungy teenager named Tommy Speck. Financially desperate and hungry for fame, Hedwig launches a career as a glam rocker. Tommy, who is initially a backun musician to his girlfriend, eventually overtakes her in the fancy of the rock public, and most of Mitchell's show takes place as Hedwig and his Angry Inch band (played by the tight, energetic ensemble Cheater) are playing a down-and-out engagement at the rocking out at a nearby football

Given such an unlikely story, that Hedwig turns out to be such a blissful lark is the result of at least three factors. Mitchell, with his slight frame, red pouty lips and hair one might describe as that of a blow-dried Brümmhilde, has a sly way with innuendo; when he leers out at the audience as the show starts and emits lines like, "I do love a warm hand on my entrance," the effect is

Dietrich-deadpan rather than groan-inducing.

Secondly, the show's songs, by Stephen Trask, are genuine, take-no-prisoners rock 'n roll – unlike the so-called rock musicals uptown on Broadway, they make no concessions to the coach-party audience. The music's uncompromising nature benefits vastly from the third reason for Hedwig's success: the Jane Street Theatre. The theatre is housed in a slightly seedy hotel along the Hudson River that once welcomed seamen and now is more apt to domicile German tourists in search of the ghosts of Bohemia past. Were she not fictional, Hedwig herself might stay here.

Like Hedwig, the revival of Cabaret that has just opened on Broadway benefits from a "sitespecific" setting, as well as from an extended investigation into androgyny. The show has been fitted into a former nightclub

The show's songs, by Stephen Trask, are genuine, take-no-prisoners rock 'n' roll

and audiences sit at ringside tables sipping cocktails and receiving the erratic attentions of bruised-looking boys and girls.

The production, directed by Sam Mendes, is conceptually a reprise of the one in London a few years ago, and it features the same down-and-dirty turn by Alan Cumming as the Emcee.

The other actors, all accomplished, are American, with the exception of Natasha Richardson as Berlin's queen of cheap chic, Sally Bowles. Richardson has scored something of a triumph with the part, and at first it may be difficult to understand why. Though she has an appealing, onpitch musical sense, she lacks the large, love-me-please voice of same time that Tommy is Liza Minnelli, who played Sally in the musical's 1972 movie version. But here Richardson is something that Minnelli has been only fitfully in her career: a good actress. Richardson's ability to bring emotional shading to her scenes allows her to do something with Sally that most other interpreters of the role do not: play the part as written.

> "Hedwig" is at the Jane Street Theatre; "Cabaret" at The Henry Miller's

# IMF and crisis prevention Dividend yield no longer biggest

fter every crisis, the international community reflects on what needs to be done to reduce the probability of future crises. It also seeks to ensure that the crises that do occur ing. The trend should con- including accounting. can be handled more effec-

While it is still too early to decide how the architecture of the international system pret the data. will change - that will be up to policymakers in national capitals and the governing bodies of the IMF - some preliminary suggestions can

be advanced. There are five lessons on

• First, we need more timely, accurate, and comprehensive data. The IMF is introduce greater transparency and fuller disclosure, for instance by providing data on forward transactions by central banks. Better data should lead not only to better informed investors, but also to better government policies. Some of the off-balance-sheet activities of central banks that were instrumental in the Asian crisis could not have continued for as long as they did had they been public knowledge. It is also clear that we need better data on short-term debt exposures, not only of banks, but also of corporations. The Bank for International Set- intensified by them, much number of countries can tlements is already working more needs to be done to benefit from access to interhard to improve data on strengthen domestic finan- national capital markets. alleringskape II. 238.

L Millian Con-

lored the new Supplemental Reserve Facility to fit the special circumstances of financial crises in emerging

Considerable thought is also being given to finding a mechanism for involving the private sector in the resolution of financial crises. There have been many suggestions on how to improve this, among them the equivalent of an international bankruptcy court or code. Another suggestion is that the international system find a way to authorise a temporary stay on payments in an external financial crisis.

There are formidable legal problems in this area, but the search for ways to deal with such problems must continue. Whatever solutions are suggested, it will be important to bear in mind the dangers of contagion, the possibility that an effort to involve the private sector in solving the problems of one country will lead to capital outflows from others.

Finally, it should be apparent that the IMF cannot perform a central role in crisis prevention and crisis management without adequate resources, including, in particular, the increase in IMF quotas - agreed to by our 182 member governments andnow being considered by the US Congress.

The new architecture of the international financial system is still on the drawing board. It remains to be seen how the international community will decide to deal with these issues, and what precisely the role of the IMF will be.

The IMF, like any institution, undoubtedly has it shortcomings. But it provides the best framework in which the international community can address global economic and financial problems that exceed the capacity of individual countries to resolve alone

ECONOMICS NOTEBOOK WOLFGANG MUNCHAU

# Could Germany soften?

minister yesterday acknowledged that a small rise in inflation was "a price worth paying in the battle to achieve high levels of employment".

Of course, the German finance minister said no such thing. It is unthinkable that a representative of Europe's guardians of mone-tary stability would ever utter such words. But it may not be unthinkable for very much longer.

Hehnut Kohl's centre-right coalition is in peril following the nomination this month of Gerhard Schröder as the social democratic candidate for chancellor in the September federal elections.

After 16 years of Christian Democratic Union government and a conservative regime at the Bundesbank, other European Union states take it for granted that German economic policy is driven by an obsession with

price stability.
If forced to choose between high unemployment and a monetary policy. More higher rate of inflation, an recently, he has launched a archetypal German central banker or politician would not hesitate to pick the former. Furthermore, they would not even acknowledge that the two are linked.

Germany has been a fully paid up subscriber to the so-called "policy ineffective-ness" theory, which says monetary policy has no long-term impact on jobs. In seeking to explain the rise in unemployment, German bankers have simply done what everyone else does: blame the government, the trade unions or the unem-

ployed themselves. A change in government in Germany might subtly change all this. While Mr Schröder is a moderate, Oskar Lafontaine, the Social Democratic party's leader, is an unreconstructed Keynesian. An SPD victory would mean the four largest economies in the EU - Germany, France, the UK and Italy were run by centre-left governments, elected with a strong agenda of tackling unemployment.

What about central bank independence? The SPD supports it, but with less vigour decessor, constantly berated ordination - if not harmoni-

the Bundesbank for running sation - of tax policies, as what he saw as an incorrect series of ferocious attacks on Hans Tietmeyer, president of the Bundesbank, for allegnomic regions. These two areas mark the edly trying to boycott eco-

A more flexible German attitude, especially over a trade-off between inflation and employment, could nar-row the political gulf between France and Germany over the conduct of monetary and fiscal policy under Emu.

nomic and monetary union.

Last year's ill-tempered negotiations over the stabilbudget deficits under Emu, was a case in point. Germany sought auto-matic penalties for countries

that exceed a deficit threshold, while France prevailed in its view that such penalties would be subject to a political vote. A German social democrat finance minister would never have pushed the argument that

German social democrats and French socialists also monetary policy could overshare a greater consensus on EU-wide co-operation in fiscal policy. They might agree to policy initiatives that to policy initiatives that when a listed expension be seriously missing in have so far been kept out- prompted the Federal celebrating the possible side the public debate. beginning of what is known in France as European economic government There is no German translation for this term. But it is

an agenda with which the

SPD might be relatively comfortable - if it boosted jobs. Institutional arrangements and the legal and administrative environment of Emu are, of course, regulated by the Maastricht treaty. This ity pact, which seeks to limit. limits the freedom of manoeuvre for newly elected

governments. The treaty demands the independence of the European Central Bank, whose main objective is stipulated as achieving price stability. The possibility of four left-wing governments confronted by an ultra-conservative central bank could open

up disturbing possibilities.
If fiscal policy were to soften under the centre-left, compensate. The situation would be similar to that in the US in the early 1980s when a fiscal expansion

euro would become a strong currency, but for all the wrong reasons. Its strength would be based solely on high interest rates, not inter-

nal strength. So far, Europe's central banking establishment has shown little flexibility in accommodating calls for greater accountability, or even transparency. Wim Duisenberg, president of the European Monetary Institute, the forerunner of the ECB and a leading candidate for the Bank's presidency, vigorously opposed the idea of the ECB publishing minutes of its council meetings. Jean-Claude Trichet, governor of the Bank of France and also a candidate, is equally opposed to such

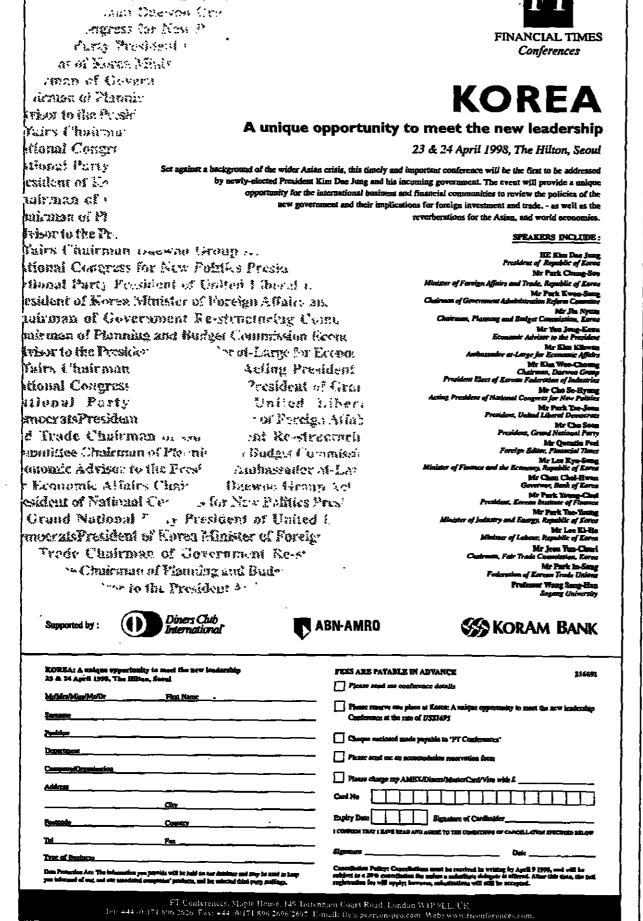

measures. The clash of attitudes between the inflation hawks and the new political leaders could turn into a losing battle for the central bankers. The ECB will not, after all, enjoy the status or the reputation of the Bundesbank for some time.

Taking the argument one step further, the ECB's very independence could one day be at stake. The current arrangements for independence came largely at Germany's behest in exchange for a commitment to start Emu by 1999. If unemployment were to remain at its current high levels or even to increase as interest rates rise in the early years of Emu, the question of central bank independence could be

revisited. So far, the ECB is ringfenced by the treaty. But it could struggle to gain credibility if it does not enjoy full political support. It is con-ceivable that the ECB will recognise and accommodate the political change, and accept a degree of co-ordination with Euro-X, the grouping of finance ministers comprising likely Emu members.

Fiscal policy will probably remain within the guidelines set by the stability pact helped by the cyclical economic upturn. And some form of "economic government" will crystallise over the next five to 10 years.

Eurosceptics would thus ment. For them, it is going Under this scenario, the to get much worse.

## **FINANCIAL TIMES**

Number One Southwark Bridge, London SE1 9HL Tel: +44 171-873 3000 Telex: 922186 Fax: +44 171-407 5700 Monday March 30 1998

## Swiss bunker mentality

banks have been under attack for handling Nazi wartime loot and sitting on money deposited by Holocaust victims. A combination of public outrage, boycott threats and lawsuits, mounted chiefly by Jewish groups in the US, have pushed the banks into an agreement in New York last week to negotiate an early global settlement".

Such a deal would be welcome. There are doubts, however, whether it will be comprehensive enough to provide the speedy conclusion that is in the interests not only of the banks but also of ageing survivors of the horrors of more than 50 years ago.

Switzerland's responsibility is now established. It was involved in three quarters of the Third Reich's foreign gold transactions, and knew at the time that much of this was "victim gold" from countries and individuals. Its commercial banks have dragged their feet in disclosing dormant accounts; one was even caught shredding account documents. A commission chaired by Paul Volcker, the former US Federal Reserve chairman, is combing through these accounts, but only due to finish late next

As a result of these revelations, several US states have threatened to boycott the big three Swiss banks, and to thwart the planned merger between two of them, Union Bank of Switzerland and Swiss Bank Corporation.

For the past three years, Swiss Some 18,000 plaintiffs have mounted a class action demanding \$20hn in general repa-

> All this has reinforced the bunker mentality in Switzerland, where there has been talk of riposting by banning US companies from bidding for cell-phone contracts and, absurdly, by denying US asparagus growers their second biggest export market.

A quick settlement is hadly needed. It should take account of three points. First, the negotiations over compensation should reflect that Swiss banks and industry have already paid nearly \$200m into a Holocaust victims fund; and that a statement of contrition has a value. Second, it should draw a definitive line under the past. What if the US plaintiffs settle with Swiss banks only to open a new front against, say, Swiss insurers?

Third, the Swiss government's recent boldness in setting up an international commission on its wartime behaviour and in proposing to sell some gold to fund a SFr 7bn Solidarity Fund for the victims of all catastrophes deserves credit. It should be contrasted with the reticence of Russia about wartime loot or of the Vatican about its wartime acquiescence in Jewish persecution. If the world goes on demanding ever more of the Swiss, the search for due compensation will lose some of its

## Boris's choice

Boris Yeltsin is still the ultimate and the political demand - suparbiter of political power. ported by the president - to Whether he knows what he is maintain employment and wages doing is rather more open to in a bloated and largely bankrupt question. He has sacked his gov- public sector. Now Mr Kiriyenko ernment just because he appeared to be tired of it, and same impossible balancing act.

appointed a political neophyta to

The other problem is that the appointed a political neophyte to form a new administration. He government does not appear to seems to expect the same contra-have the authority to face down gration that have really hit us." seems to expect the same contradictory mix of political and economic policies to be pursued as before, but he is doing nothing to make that task any easier. Mr Yeltsin is becoming part of Russia's problem, not its solution.

soften!

Sergei Kiriyenko, the hapless technocrat who has been thrust into the prime minister's job, has one apparent advantage: no one knows enough about him to oppose his appointment. Although he comes from the reformers' camp in the government, he may well be able to manoeuvre his way past the apparent hostility of the communists in the Russian Duma, and thus gain parliamentary endorsement. But that will be only the start of his problems.

At one level, Mr Yeltsin may have been right to sack the old administration, headed by Victor Chernomyrdin. It had become bogged down in rivalry between the reformers and the defenders of the status quo. But its bigger problem was the contradiction between budgetary rigour, essen-

The events of the past week in tial to curb rampant inflation and Russia have proved one thing: stabilise the value of the rouble, stabilise the value of the rouble, is being ordered to perform the

the insidious influence of Moscow's big bankers, men like Boris Berezovsky and Vladimir Potanin, who are also struggling for the ear of the president.

Mr Yeltsin's greatest success has been to keep his powerful courtiers squabbling, and ensure none emerges with decisive influence. But the price is that he provides no clear direction, and no support for Russia's fledgling institutions and legal system. His performance last week when he met Jacques Chirac, the French president, and Germany's Chancellor Helmut Kohl, suggests that he is getting more unpredictable.

In seeking to forge a sustainable economic policy, Mr Kiriyenko must maintain the drive to raise tax revenues, while keeping public spending under control. Instead of not paying wages. which has been the policy of desperation hitherto, he must cut the public pay roll. That will not be popular, and he will probably get no support from the Kremlin. But he has no alternative.

with its decision last week to block the proposed \$9bn takeover of Northrop Grumman by Lockheed Martin. The move appears to end five years of active government encouragement of consolidation among defence contractors.

The defence department says it had clearly signalled its concern about anti-competitive aspects of the merger between two of the last three US military aircraft makers. But Lockheed was taken by surprise and infuriated. Northrop's top executives had already pocketed \$150m in stock bonuses as reward for the deal.

In striking down the proposed merger, says Lawrence Korb of the Brookings Institution, a Washington think-tank, "I think the Pentagon is saying: Basically we can't go any further."

If that is the message, it is in sharp contrast to that of recent years. Since 1993, the departments of justice and defence have nodded through 37 transactions worth more than \$62bn in an extraordinarily rapid rationalisa-tion of the defence and aerospace industries. Famous names such as McDonnell Douglas, Martin Marietta and Grumman have disappeared as independent entities. The result has been what Jacques Gansler, the Pentagon's procurement chief, calls "a dramatic compression of the industry, both horizontally and vertically".

The defence department favoured restructuring because, with annual weapons spending down nearly 70 per cent in real terms since the mid-1980s, it could no longer support the bloated industry built up during the Cold war. Budgetary pressures have forced it to become a smarter buyer. This prompted it to encourage mergers in order to produce financially strong contractors and to put pressure on them to cut costs.

But for the Pentagon, this process may have gone too far. If the Lockheed/Northrop Grumman merger had gone ahead. Lockheed would have been able to build almost a whole aircraft airframe, electronics and weapons - without inviting others to compete for important sub-contracts. It would have dominated areas of electronics in which innovation is vital, becoming one of only two builders of military aircraft.

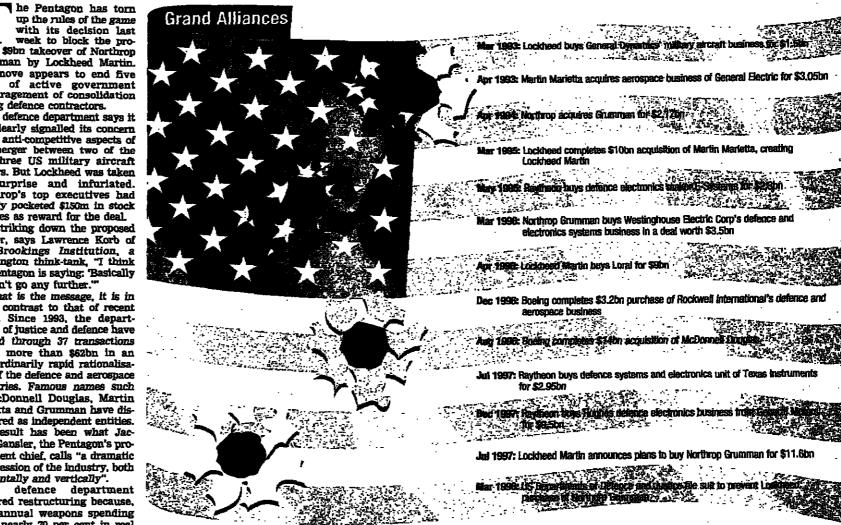

"It's the combination of the vertical and the borizontal intesays the Pentagon's Mr Gansler. He insists that the same criteria were applied to the latest deal as to previous mergers, and says he still wants to see further consolidation elsewhere in the industry to reduce excess capacity.

The Pentagon's stance on the Lockheed merger, however. appears to signal an intention to prevent acquisitions that would enable manufacturers to equip their platforms - aircraft, ships and tanks - exclusively in-house, with their own electronic systems. Increasingly, these systems are the high-value elements that give the edge to modern weapons. The Pentagon's position could rule out several potential mergers involving companies that make ships and mili-

tary vehicles. By preserving Northrop Grumman as an independent builder of aircraft, the Pentagon has shown it is uncomfortable with fewer than three competitors in most

## A takeover too far defence industry. Alexander Nicoll asks why

The Pentagon has called a dramatic halt to five years of rapid consolidation in the US

Mr Gansler suggests Northrop price. "I understand the concern might win significant business in

Lockheed does not see the logic of keeping Northrop separate. It there is a lot of competition in complains that the bar "constitutes a de facto policy reversal that treats this merger differently than all the others". The acquisition of Northrop would actually have enhanced competition, it argues, because it would have resulted in a manufacturer with the power to rival Boeing as an aircraft maker and Raytheon as an electronics company. Boeing and Raytheon are no doubt relieved that a total \$27bn of acquisitions were approved last vear before the Pentagon changed its tune.

According to Lockheed, the government's decision is based on a misunderstanding of how the industry works. "Vertical integration is not had. What is bad is exclusionary conduct. We have a history which shows that we don't do that ... We are not going to favour our own electronic system if somebody else's is cheaper or better."

John Harbison of consultants Booz Allen & Hamilton says as well as to Northrop's B2 experience shows that aircraft makers do not unduly favour in-house systems over those of other contractors. Such conduct would risk losing orders. "The prime contractor wants to come up with the best design. If there is a sub-optimal solution in house, the last thing they're going to do is to keep it in the programme."

The biggest defence companies like to vaunt their skills as prime contractors managing programmes and integrating the complex systems that make up modern weapons. Although there are few of them, they claim to run real competitions for each segments of the defence business. sub-system, ensuring a keen

about sole-source production," says Peter D'Angelo, chief financial officer of Raytheon. "But

the industry." However, the consolidation has produced an industry in which the main participants are involved in each other's activities to such a degree that the scope for pure competition is in doubt. Such concerns are bound to persist, even though companies are forced to erect "firewalls" to prevent the internal flow of sensitive information.

The big aircraft makers do work on most of each other's programmes. Boeing contributes to Lockheed's F22 Raptor, the US Air Force's new stealth fighter,

### The Pentagon has made clear it now prefers not to see fewer than three competitors

stealth bomber. Northrop makes a significant proportion of parts for Boeing aircraft, including the F/A-18 E/F Super Hornet, the US Navy's new strike fighter, the C17 military transport, and the Boeing 747 civil airliner.

The aircraft industry is putting its all into a competition between Lockheed and Boeing to win the \$100bn Joint Strike Fighter programme, which will supply three US services and Britain. But since this will probably be the last new US military aircraft to be hullt in numbers for perhans 20 years, the Pentagon is likely to find a role for the loser in building the winning design. The difficulty of preserving competition underlines the technology and computing. unusual nature of the defence business, which cannot easily be forced into the commercial rigour of other industries.

First, the government - hamstrung by bureaucratic conservatism and subject to strong political pressures - is its only buyer. The domestic market is finite and dwindling - though the Pentagon still has a not insubstantial \$49bn to spend on new equipment in fiscal 1999. Second, a weapons programme

typically has a 10- to 15-year development period and is subject to extensive modifications because of changing perceptions of threat and experience of use in combat. Products are usually made in quite small numbers and at slow production rates, matching the customer's budgetary capacity and military needs

Third, capabilities have to be maintained even when there is no demand. Raytheon, for example, produced 130 Patriot missiles a month during the Gulf war and has sinced souped them up with greater accuracy, sensors and range. But most customers have all they need for the moment.

These factors mean that, however much companies are driven by commercial pressures or the Pentagon to make savings through mergers and tighter business practices, there are always likely to be constraints on cost-cutting.

The problem for traditional defence companies is compounded by the fact that technology is fundamentally altering the nature of their business. Instead of using entirely bespoke products that break new ground in technology, the military increasingly finds itself having to incorporate off-the-shelf products developed for purely commercial use, especially in information

Microsoft is not thought of as a defence contractor. But its software is on every screen in the Pentagon. Mr Gansler wants to attract others. "Hewlett Packard is a world-class corporation in the electronics business, but it doesn't take R&D contracts from the defence department because of the odd way we do business cost-accounting systems and other requirements." That will require changes at the Pentagon,

he says. This raises the prospect that, rather than a dwindling number of defence suppliers, there could be a new set of commercially oriented, high-technology providers of next-generation military equip-

"The question for the Pentagon is not will I have competition now, but will I have competition in 20 years' time," says Mr Harbison of Booz Allen.

With its decision on Lockheed. the Pentagon may be signalling just that: it is prepared to pay for some market inefficiencies among platform makers now in order to promote future competition among high-technology suppliers. Although the aircraft may carry the name of a traditional manufacturer, the real value-added will be in the systems that make it fly and direct its weapons. It is here that the Pentagon must make sure it pre-

By keeping alive more platform makers than is strictly necessary, technology suppliers to bid for serve the purpose of driving comweapons will have their lethal

## **Educating Bill**

President Clinton's Africa safari, Clinton agreed. which ends with his visit to Senegal tomorrow has not only raised the profile of a marginalised continent, and improved the image of a region associated with disaster. It has proved a salutary learning experience for Mr Clinton. It has brought home to him the enormity of Africa's problems, and the inadequacy of the

US response. When Mr Clinton landed in Ghana a week ago, he hailed the political and economic reforms that were part of the continent's "new renaissance". And he paid tribute to Africa's leaders for overcoming disasters for which the west had to take a share of the blame. He condemned the barbarity of the slave trade, but stopped short of the apology that many Afro-Americans seek. He acknowledged the terrible impact of the Cold War, when superpowers fought battles by proxy on African turf. And he admitted that the US had not done enough to stop the genocide in Rwanda

But by the time he reached South Africa the optimistic note on which journey began had given way to a more sombre appraisal. Mr Clinton conceded the limitations of the Africa Growth and Opportunity Act, the main plank of US policy. Trade was not enough, President Nelson Mandela bluntly told his guest last week, and President other world leaders followed suit.

"Trade cannot replace aid", he

said "when there is still so much poverty, flooding, encroaching deserts, drought, violence, threatened food supplies, malaria, AIDS and other diseases." He went on to reassure African

governments. America's offer of easier access to US markets to Africa's reformers would not come at the expense of US development assistance, he promised. He said he would urge Congress to restore African aid, currently worth \$700m a year, to its historic high level of \$830m a year. And he pledged greater support for efforts to reduce Africa's external debt burden.

Whether the president can persuade Congress to put these promises into practice remains to be seen. Nor did Mr Clinton deal with the problem of the military regime in Nigeria. Instead, he has muddied the waters.

The president has given the impression of backing away from the position set out by his most senior Africa policy maker, who said that the election of General Sani Abacha, Nigeria's military leader, in a presidential poll due later this year would be unac-

ceptable. But for all the shortcomings of US policy, Africa should welcome the fact that the world's most powerful leader has put the continent on his agenda. It is time

### **Sacrificial** lambs

Tens of thousands of sheep will meet a sticky and across Turkey next week during the Feast of Sacrifice, when the better-off slaughter an animal, give meat to the poor and have a feast. The government of Prime Minister Mesut Yilmaz may face its own sticky end soon after.

The freque coalition depends on the parliamentary co-operation of Deniz Bavkai's left-wing Republican People's party. But Baykal now says the government has reached the end of its "natural life", and is apparently set to precipitate early elections. Polls do not have to take place until 2000, but could be held as early as October: coalition leaders are expected to meet after the Feast of

Sacrifice holiday. Baykai's calls for early polls have been getting louder amid a power struggle between Yilmaz and military leaders over the army's determination to wipe out radical islamic activity. Last week the generals delivered a humbling put-down to Yilmaz on the issue, which didn't help a government aiready under fire for inability to deal with triple-digit inflation and other

economic difficulties. But the top brass may have overplayed its hand. The generals tear that early polis might see a surge by the Virtue Party, the new Islamist umbrella for most of the banned Welfare Party. But their strongerm tactics may have made it easier for Baykal to sacrifice Yilmaz.

Then again, it might just be that the military is confident of remaining in control, whatever happens.

### Staying home After India's change of government, new ministers are busy moving into

their big official bungatows, sunk deep behind the neem trees in South Delhi's boulevarded VIP enclave. With high office comes the penoply of Indian VIP security armed guards, chauffeurs, official

cers and escort vehicles, aztes

topped with barbed wire and Portakable offices to vet visitors At least it does for more new ministers: but not for defence minister George Fernandes, leader o the Samata party, India's most amous socialist, scourge of foreign multinational companies and ardent cempaigner for treedom and

lemocracy in Tibet and Burma. George, as the Indian media knows him, is staying put in his arge, spersely furnished and slightly peeling bungalow. He has refused to have an armed guard at the gate or even a gate. Scoming a chauffeur, he drives his own Premier Pedmini. an ancient, locally-made Fiat that has no air conditioning.

He sometimes walks the kilometre or so to parliament, unprecedented In Delhi "VIP culture" where status is directly proportional to the number of cars in the ministerial cavalcade. He takes the stroll "only when it's not too hot", explains one of his three staff - about a tenth of the usual ministerial household.

**OBSERVER** 

In 1912, a Spanish football team took the name of a famous ocean liner. Now the success of a film about the ship isn't rubbing off on the brave footballers from Pola de Laviana in the northern Asturias region.

The club plays in Spain's third division - a bit of a euphemism as there are two second divisions - and is now near the bottom. Like its ocean-going inspiration and most of the Asturias coal mines, it looks like Real Titánica is going down.

### Silicon ballyhoo

Silicon Valley is buzzing about a forthcoming book by Gil Amelio, the former chairman of Apple Computer and self-styled "transfor specialist. Due next month from Harper Business. On the Firing Line is Amelio's account of his 500 days at Apple - and in particular the days before he was custed.

Amelio claims that Steve Jobs, now Apple's interim chief executive. and Larry Ellison, chalman and chief executive of Oracle and also a

member of Apple's board, consolred to undermine the board's confidence

He describes Jobs as an "erratic" and a "manic" manager, says other Apple executives were insubordinate and arrogant and has a go at some of the journalists who reported Apple's management turmoil. Amelio's book follows in the

footsteps of Odyssey: Pepsl to Apple by John Sculley, former chairman and chief executive, chronicling his early experiences at Apple. At least Sculley did manage not to sound like a dented ego out for revenge.

### Hot meals

The UK's More Group and France's Decaux have been arch-rivals for years in the cut-throat world of scented bus shelters, illuminated billboards and self-cleaning public loos. Now Decaux is threatening to spoll More's plan to sell itself to Clear Channel of the US with a bid of its own.

More chief executive Roger Parry is keeping a stiff upper lip: every offer will be considered impartially, he insists. But there's one thing about

Decaux's possible bid which clearly grates: the French group has hired Lazard Brothers to advise it. "I know Marcus Aglus (Lazards vice chairman) very well," says Parry: "I had dinner with him three weeks aco. And I had breakfast with Nick Shott (the other Lazards director advising Decaux) the week before that." Observer hopes that Lazards picked up the blt.

the idea may be to encourage them to team up with a widening range of electronics and highnew programmes. This would petition, innovation and low prices in the areas where future

### Financial Times 100 years ago A Revolution in Cab Travel

People who go down to the City in cabs, or it may be to the West End, must apparently resign themselves to the prospect of great changes. The real revolution in street traffic has yet to come; we have no doubt that motor enthusiasts still believe that in a year or two we shall all be riding in mustand-coloured vehicles whose motion is accompanied by a noise resembling that of a lawn-mower, or in carriages which snort like Puffing Billy, emit the vilest of odours and occasionally vary the monotony by blowing up. But there is more to come. The days of lavish fares, demanded with no recent to the time or distance of the journey, are numbered. When the maiden lady from the country, whose notions on fares are decidedly provincial. departs from her vehicle with a wealth of impediments, the cabby's lurid improvisations on human nature in general and the tair sex in particular will lose some of their force. The change is to be worked by a device called a taxameter, an

automatic indicator which is put in motion by a flexible driving shaft attached attached to the wheel axle. In Berlin, 3,500 of these devices are regularly employed. Cabmen like them and passengers will not be without them.

### THE LEX COLUMN

# Capital project

When Europe's leaders met at Maastricht in 1991, the last thing they intended was that monetary union should be a vehicle for spreading Anglo-Saxon capitalism. But that will be the most dramatic effect of the single currency. The euro will spur the creation of a gigantic single European capital market like America's.

There will be more equities and corporate bonds. And, as it grows, the capital market will exert its influence on all other sectors of the European economy. It will increase the pressure on companies to perform. Pursuit of shareholder value, hostile takeovers and better corporate governance - all will become increasingly prominent features of the European land-

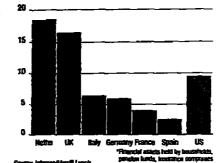

### investors

Europe's capital markets are still highly fragmented. Savings barely flow across frontiers. In Germany, France and Italy, only about 5 per cent of financial wealth is held abroad. Even in the UK and the Netherlands, the proportion is only 15-20 per cent. This is largely due to currency frontiers. In most countries, regulations require insurance companies to hold the bulk of their assets in the home currency. Even when there are no bars, many investors are deterred from venturing abroad

by fluctuating exchange rates. Rub away the currency frontier - as happens in euroland next year – and capital will no longer be trapped at home. Savers will focus less on the risk of foreign investment and more on the risk of keeping their eggs in one basket at home. They will gravitate towards those investments which promise the best returns. Companies will have to compete more vigorously for funds; no longer will they be able to rely on stagnant pools of domestic

European investors hold few shares. In France, Germany and Italy, only about 20 per cent of financial wealth is in equities. The exceptions again are Britain, where the proportion is over a half, and the Netherlands, where it is more than a third. Unsurprisingly, both are countries where private pensions are popular. Moreover, corporate bonds - a big asset class

in the US - barely exist in Europe. In most countries, the traditional Home country bias Foreign assets as a % of total\* (1996)

ment bonds. But the single currency will accelerate a shift towards Anglo-Saxon portfolios. EMU-inspired macroeconomic discipline will spur the creation of private

The monetary and fiscal straitjacket is also cutting the supply of government bonds and, in peripheral countries, reducing interest rates. Investors are already on the hunt for alternative assets promising higher yields and/or capital gains: corporate bonds and equities seem to fit the bill. The torrent of money pouring into Italian mutual funds is a harbinger.

### Companies

The flip-side of the coin to investors' cash-biased portfolios is companies' debtbiased balance sheets. Gearing in continental Europe is high - Italy's, for example, is about twice the UK average - and the lion's share of the debt is bank bor-

At present, there is insufficient corporate paper to satisfy the growing demand something helping fuel the bull market. But continental companies are already taking advantage of boom conditions to issue new equity while the nascent junk bond market is also taking off. In time, family-owned groups - which are such a feature in Germany and Italy - will be tempted into the capital markets. Even when the frenzy subsides, the availability of large liquid bond and equity markets

investments have been cash and govern- banks. Not only do they risk being cut out ride.

of the process of recycling capital from investors to companies; the euro's arrival will also sharpen competition for whatever traditional banking business remains. Once denominated in the same currency, loan and deposit rates will be directly comparable across euroland. The market will be unforgiving to those banks, like Italy's, which manage to cover up their inefficiencies only by charging

fat interest margins. There will be winners too, Britain's efficient and innovative banks would be well placed to clean up - except for the fact that the UK will not be in euroland from the start. One consequence is that British financial institutions could face discrimination if they try to acquire counterparts across the channel. Already there are signs of France, Germany and Italy form-

### Financial intermediaries

Other potential winners are insurance companies, fund managers and investment banks - which have an edge in purveying bonds and equities. In insurance, the Europeans look well placed. But, in investment banking, the risk is that the US investment banks will run circles around them.

The role of financial intermediaries will not merely be to respond passively to investors' and companies' wishes. They will also be important actors in driving forward the creation of an integrated capital market. As they develop distribution networks throughout euroland, they will accelerate the shift in portfolios and balance sheets towards the Angio-Saxon model.

The intermediaries will also be agents in harmonising the financial infrastructure. Takeover rules, corporate governance norms, accounting conventions, savings tax regimes, performance measurement techniques and securities regulations - all these differ across Europe. That will prevent Europe's capital markets being fully integrated at the time of the euro's birth. But the international flow of capital will grind these differences down. That will lead to a virtuous circle, encouraging more capital to flow across frontiers and further eradicating differ-All this spells trouble for Europe's ences. It promises to be a white-knuckle

PILOT FINDS MERCHANTS ARE STOPPING AMERICANS USING TECHNOLOGY

# Shop assistants stand in way of smart cards

Store assistants have emerged as the biggest obstacles preventing American shoppers paying with "stored value" cards embedded with a computer chip - or smart cards as they are called in the US.

A six-month pilot scheme, run by a consortium including Citicorp. Chase Manhattan, MasterCard and Visa, was launched to discover why the US has been far slower than the rest of the world to encourage use of stored value cards. The banks' most ambitious programme yet ends this week in Manhattan's Upper West

Many merchants say they are unhappy with the cards - where accounts are kept on the embedded computer chip and the value is carried on the card – and take-up by consumers has been unimpressive. Only about 10 per cent of the 40,000 cards distributed last October have

However, the banks involved say the take-up rate compares favourably with the early days of automated teller machines and debit cards in the US.

Participants in the pilot scheme said they were happy with the performance of the technology,

achieved But as Citicorp said: "We learnt a little more than we expected to learn. We under-estimated the difficulty that we would have at the merchant terminal."

Carole Lockie, who heads the project for Visa, said the consortium was embarking on a campaign to educate merchants - and in particular shop counter staff.

She accepted that consumers often had difficulty persuading cashlers to accept payment by smart cards: "In some respects, at this point the burden is on the consumer who understands the product to train merchants."

Attempts by the Financial Times in the past week to buy items in the test area using either Citibank's Visa Cash or Chase's Mondex card appeared to confirm this. The cards esually induced looks of horror or bemusement behind the counter.

Several merchants said in the early weeks of the scheme that the machines for operating the cards did not work - a claim flatly denied by all members of the consortium - and

refused to accept them. An attempt to buy a packet of American shoppers, Page 4

which allows two different card Rolaids anti-indigestion tablets at systems to be operated on one termi- the Food Emporium on Broadway nel - the first time this has been proved difficult. First, an assistant sald his machine was broken. although the card could be used at any of the other aisles. Twenty minutes later, at another aisle, the assistant inserted the card into the machine upside down - so that the chip never made contact - and then asked for cash.

An attempt to buy a packet of tofu at a health food shop on Amsterdam Avenue met the same response. "It's fully, "but the machines don't work."

Starbucks on Columbus Avenue, the most popular coffee shop in the area, laughed at the suggestion of paying for a cappuccino with a card. The Starbucks chain still refuses to take anything other than cash.

However, the education campaigns at the larger retailers are having an effect, with attempts to buy a Big Mac in McDonald's, a book of stamps at a post office and a canliflower at Fairway greengrocers all proceeding smoothly. Smart cards were also used to get shoes shined and to buy

Smart cards tail to impress

## Europe faces poor harvest after frosts damage fruit

By Gary Mead in London

Suropean fruit farmers are counting the cost of last week's frosts and snowfalls, which have badly damaged crop prospects for the summer. The year may well be a repetition

of 1997, when early frosts were followed by hailstorms and winds that knocked much of the ripening fruit from the trees. This year the damage has been caused earlier, and specialists predict it could be much worse. The problem has been worsened

by an unseasonably warm winter, of cherry, apricot, pear, apple and other deciduous trees throughout

the leading Mediterranean growing estimated to be worth \$2.5bn a year. southern France.

Italy, where local growers say the cherry harvest has been almost wiped out, with losses of at least 80 per cent. Apricot and kiwi fruit harvests will also be seriously affected.

Pear and apple trees have been less seriously damaged because they of apples and pears.

### Liffe set for shake-up

The resignation last week of David Kyte from the board of the London International Financial Futures and Options Exchange could mark the start of an extensive reshuffle among the executives of Europe's largest derivatives market. Mr Kyte's trustration with what he describes as "Liffe's apathy" in introducing new technology was partly responsible for his depart ture. He was also motivated by a disagreement over Liffe's main source of revenues, the fees the exchange charges on every trade. Page 18

Priorities clear at Morgan assets arm Everyone wants to know how J.P. Morgan's asset management arm, with about \$280bn of assets under management, can compete and expand in a rapidly consolidating market. Ramon de Oliveira, its head, has three priorities. The first is to maintain the company's leading position in providing defined-benefit pension plans. Number two is expansion into the faster-growing market of defined-contribution pensions. Third is increased profitability. Page 17

### **CURRENCIES**

Tough week ahead for the yen

Against the dofter (V per S)

The yen is under fire. It closed last Friday debilitated at Y130.3 to the dollar, even though Tokyo has talked it up. Officials hope to boost the Nikkei 225 share average until Tuesday, the end of the fiscal year, to help Japan's fragile banks, which put the year-end values of their sharehold-

ings on their balance sheets. On Wednesday, the "Big Bang" of financial deregulation begins. Japanese investors are likely to seize the opportunity to place more money abroad. On Thursday, the Bank of Japan's quarterly industry survey is expected to be disastrous. Page 23

### **EMERGING MARKETS**

Yeltsin sackings lift Russian shares The Russian equity market appears to have weathered the upheaval caused by President Yeltsin's sacking of the cabinet last week, with a gain of almost 2 per cent on the week. Although Russia is one of the more volatile markets, it is exactly such sharp price movements that make it attractive for funds taking a high risk-high return strategy. As sentiment towards Russia turns cautiously positive, global emerging market funds and eastern European funds are once again focusing on the country. Page 19

### **MARKETS THIS WEEK**

**New York** 

The week ahead is light on corporate earnings announcements, but thoughts are turning to the flood of first-quarter results that begin the week after next. The possibility that the numbers will disappoint was one factor keeping the Dow Jones Industrial Average below the 9,000 level last week. Page 20

Bacardi in \$1.83bn

deal for Dewar's and Bombay brands

John Willman in London

Diageo, the world's largest drinks company, will today announce it has completed the sale of the Dewar's scotch whisky and Bombay gin brands to Bacardi-Martini for about \$1.83bn, according to

executives close to the deal. Bacardi, the Bermuda-based maker of the white rum, is paying substantially above expectations. Analysts thought the brands would bring in less than \$1.2bn but the interest of most of the world's large drinks companies, joined by several financial buyers in a starting field of more than 20, ensured the higher price.

Diageo and Bacardi signed the cash deal on Friday evening in London. The sale was required by the US Federal Trade Commission as a condition for approving the merger of Gumness and Grand Metropolitan in December.

The auction was conducted by Credit Suisse First Boston, the investment banking arm of Credit Suisse, the Swiss bank. The FTC had given Diageo until June 6 to make the disposals to a single buyer. The acquisition of the two

brands is a step in Bacardi's with just over 800,000 for the strategy of becoming the number two, Diageo's J&B world's "number one" spirits

company. In 1992, it acquired Martini, the Italian company that produces the eponymous vermouth as well as Asti Martini. the sparkling wine.

That brought it a scotch 2.5m cases. whisky in William Lawson's, which has raised sales 36 per cent in the last five years to 1.02m 9-litre cases in 1997. according to Drinks Interna- profits last year. tional Bulletin. Bacardi rum is the world's best-selling spirits brand, with 19.6m cases sold last year.

Dewar's, with annual sales worth more than \$520m, has been losing market share since 1993 - down 9.7 per cent to 2.8m cases last year.

uted about £60m to Diageo's pre-tax profits, net of perhaps £40m on marketing expendi-Diageo can shrug off the sale, with four other scotches

selling more. Its Johnnie Walker Red Label is the global leader at 7.9m cases. For Bacardi Dewar's offers market leadership in the US

it sells 1.5m cases, compared

premium scotch market where

## **Airlines** telecoms provider may float

By Christopher Price

Sita Telecommunications Holdings, a global telecoms group, is considering a stock market listing likely to value the group at more than \$1.5bn. STH is a Dutch-based holding group for Equant, a company supplying telecoms services to its airline owners and other organisations, and

tion technology concern. Like many telecoms and IT groups, STH has been experiencing strong growth in the past two years. Revenues in the year to December 31, 1996, amounted to \$390m, an increase of 16 per cent on 1995. Analysts believe these could increase to more than \$500m in

ITS, a software and informa-

this year. Equant, based in Atlanta. Georgia, owns lines, switches and hubs in 225 countries, leasing and using third party lines for transmission where necessary. Besides airlines, its main customers are multinational corporations. Its competitors are alliances such as Concert and Global One.

STH believes its high-speed network is suited to the fast delivery of data with a potentially huge market among large corporations. Any new money raised in a flotation would be used in the development of the network and the increased provision of additional services, such as data Sita, the Société Internatio-

nale de Télécommunications Aéronautique, a non-profit organisation created in 1949 to provide telecoms services for its airline members, owns 60 per cent of STH.

Morgan Stanley Capital Partners, part of the US investment bank, has a 30 per cent share, with the remaining 10 per cent owned by employees.

The New York Stock Exchange is understood to be the most likely place for a listsuch as Amsterdam and Paris also likely to be considered.

The group's management was strengthened in December with the appointment of Duncan Lewis, 46, former chief executive of Mercury Communications in the UK, as an executive vice-president for strategic development.

Mr Lewis joined the group after the failure of an attempted management buy-in at Racal Telecom, the UK telecoms arm of Racal Electronics.

TAKEOVER BATTLE AMERICAN AND BRITISH GROUPS FIGHT OVER DATABASE MARKETING COMPANY

## **ABI** makes 'final' bid for Metromail

and Gautam Malkani in London

The bid battle for Metromail. the US database marketing group, took a new twist over the weekend when American Business Information raised its offer in a final attempt to see off a competing bid by Great Universal Stores of the UK.

On Saturday ABI, the Omaha-based business information group, informed the board of Metromail that it was raising its bid to \$37.48 per share, comprising \$35 a share cash and 0.2 shares of ABI Class A common stock. ABI described the raised bid as "its best and final offer" and said it was

had been bidding \$33 a share.

would have to meet to determine whether ABI's offer should formally be termed a "superior offer". Meanwhile GUS would also be deciding whether to raise its offer to better ABI's, the advisers said. Yesterday Metromail could

not be reached for comment. In London during the evening, GUS said it is "considering its position" and that "hopefully we will have a response later on today".

In a statement issued by ABI on Saturday, the company said

nearly \$3 a share above GUS's it "notes that the cash portion its new bid on Saturday, then to its hostile £1.6hn cash offer of \$34.50 per share. ABI of its proposal is superior to giving Metromail's board suffi- bid for catalogue retailer opportunity to participate in the combined future entity".

On Thursday, after GUS had increased its offer from \$31.50 a share to \$34.50 a share, valuing Metromail at \$910m, ABI had indicated to Metromail that it would bid 25 cents a share higher than any bid by GUS. On Friday, a Delaware Chancery Court judge rejected ABI's attempt to halt the GUS-Metromail agreed takeover.

Under the terms of Metromail's takeover agreement with GUS, ABI had to submit

the totally cash value offered cient time to determine Argos. Analysts said investors Yesterday advisers to ABI by GUS, and the equity compo- whether it represented a supe- would think that if GUS were said the Metromail board nent of ABI's offer provides an rior offer before 11.59pm on prepared to chase Metromail, Saturday. Advisers to ABI said it would be even more deter yesterday that it was unclear whether Metromail's board

If ABI had failed to raise its offer, GUS's bid for Metromail would have gone unconditional tomorrow.

If GUS does decide to raise its bid, it is likely to be greeted unfavourably by investors, according to City of London analysts. They argue that GUS's decision to raise its bid had set a dangerous precedent

mined to win Argos - and that would mean a higher offer.

in a move that could force GUS to increase its bid, Argos is expected to announce a share buy-back of more than £350m. It could be announced by the end of this week if the UK's Office of Fair Trading gives the go-ahead to GUS's 570p a share bid. The OFT is expected to recommend

lessons to be learnt from Asia matter to international get momentarily too high or portfolio investors? Only un to a point. Stanley Fischer, the too low, they are quickly arbitraged back into line. International Monetary Fund's first deputy managing director, sums up the lessons to be drawn from Asia in\_ today's Financial Times (Page

12). As far as emerging economies are concerned, he says, the world needs improved data, sharper surveillance by the IMF. stronger local financial systems, higher standards in bankruptcy and accounting, and more prudent capital

18

18

Does the debate about the

account liberalisation. Each of these is potentially contentious, as the IMF's agonised internal debate on surveillance, reported on the front page, reveals. Reforms that are the subject of such controversy are often implemented only slowly, or in partial form. Attempts to improve the transparency of data about emerging

economies after the Mexico crisis bear witness to these difficulties. Worse, many of the reforms have limited value in protecting investors against the boom-bust cycle in emerging markets. Does anyone seriously think that better accounting in Thailand or clearer information about Korea's capital flows would have deterred overseas

investors? The academic literature on bow markets work casts some light on this question. For many years, academics have argued that markets are efficient, in the sense that they

accurately reflect each piece of information as it emerges. If prices of individual securities

The IMF's emphasis on more information – from emerging economies and from the Fund itself - fits neatly into this view of the world. A steady flow of accurate information would quickly be reflected in prices, preventing bubbles from forming and minimising the risks of an abrupt loss of confidence. But over the past two

decades, holes have been poked in the efficient market theory, in a way that casts light on Aslan bubbles. Individual securities are kept in line by the power of arbitrage - but whole asset classes may be too big for the arbitrage effect to work. Even the very biggest hedge funds can scarcely sell short the whole of the south-east Asian equity market. And even when they do take bear positions. they can influence prices for the entire asset class only when they are working with the grain of market momentum, not against it.

The conclusion for investors is that bubbles in broad asset classes can occur, often based on the belief that some transforming change has happened, that "this time it's different". This sort of view is most plausible in rapidly growing economies, sufficiently far away from the main centres of finance to blur investors' perceptions.

Because such bubbles can

may be too dangerous to bet consistently against them. Rather, the trick may be to "ride" the bubble, seeking to jump off before it bursts. In principle, better

information (at country and corporate level) will help investors time that decision correctly. In practice, however, it may simply change the moment at which a bubble-destroying panic occurs. And since the information flow starts to deteriorate just at the point at which it becomes critical, it may prove difficult to use it effectively to time

The alternative approach to solving the problem of bubbles in emerging markets, proposed by some economists, is to place limits on capital inflows. These are likely to discourage investors only if they are so severe as to choke off portfolio investment flows completely. Otherwise, investors will seek to get exposure to the target economy in whatever way they can, driving up values in such restricted assets even further.

Investors may thus feel caught between two stools. If they do not chase up assets in bubble categories, they risk slipping far behind their peers. If they do follow the herd, they contribute to a collective mispricing that will eventually trap them in an inevitable crash. The IMF's prescriptions. valuable though they may be for finance ministers and interpational institutions, do little to ease this dilemma peter.martin@FT.com

## Spanish gold that ancient Romans missed

### By Kenneth Gooding, Wining Correspondent

Gold is being produced in Spain again for the first time in nearly 2,000 years. The El Valle mine in the northwestern region of Asturias. whose mines provided the Roman Empire with much of its wealth, has started up

American and South African mines, it will be western Europe's biggest gold producer and plans are already in place to take annual output up to 150,000 ounces.

valley of the River Narcea at Carles, near the town of Salas. The historian Pliny Alice Rawsthorn and John Salas. The historian Pliny recorded that at one time 60,000 slaves were employed in the Spanish goldmines. Evidence of their labours still exists: traces remain near El Valle of the Roman reservoirs and sluices used to direct water at the topsoil to expose the gold.

The ore at El Valle is relatively high-grade, containing more than five grams of gold a tonne, but the Romans missed it because it is disseminated in very fine grains through the rock and is invisible to the naked eye.

Gold production comes only nine months after construction started, 15 months three-and-a-half years since the owner, Rio Narcea Gold Mines, listed on the Toronto stock exchange.

Chris von Christierson, its South African chairman, says El Valle is producing gold at an average cash cost of \$186 (£110) an ounce so that even with the price at a lowly \$300, "we are in the

## troy ounces of gold a year. Although this is modest by the standards of some North LVMH duty-free chain freezes The mine is situated in the alley of the River Narres of

## Willman in London

DFS, the duty-free shopping chain controlled by LVMH, has imposed a two-month freeze on payments to more than 40 suppliers - including many of the world's largest drinks, tobacco and luxury goods groups.

The chain wrote to its suppliers two weeks ago asking them to accept a 90-day payment period instead of the existing 30 days. Despite protests from many larger producers, it is determined to impose the new terms.

DFS has fallen victim of the financial turmoil in the after the production Asia-Pacific region where is go-ahead was given and does most of its business. The decline in the number of tourists has reduced operating profit from FFr1.73bn (£170m) on sales of FFr14.01bn in 1996, FFr578m on sales of

FFr13.42bn in 1997.

Myron Ullman, chairman and chief executive, said the extension was a temporary measure for 1998 and followed a similar step after the Gulf war. "We got co-operation from vendors in 1991 and we are pleased we are getting their overwhelming support again this time." he said. With normal payment terms of 30 days. DFS was "probably the fastest

payer in the industry". An executive at one supconsidering action to enforce reducing stocks.

the 30-day payment period specified in contracts with DFS. But another said DFS had "sufficient muscle" to force through the extension.

One perfume manufacturer described DFS as "notorious" for demanding credit extensions from suppliers long before the LVMH acquisition. "We've had a series of run-ins with them about this over the years."

LVMH took control of DFS in late 1996, when it acquired 61.25 per cent of the chain for FFr13bn. Suppliers warned then it would use its influence to the benefit of its own brands and the detriment of their own.

The French group is the world's largest producer of brandy and champagne and has a range of luxury goods including Louis Vuitton luggage, Christian Dior per fumes and the Givenchy fashion house. The purchase increased

LVMH's exposure to the Asia-Pacific which accounts for about 40 per cent of its FFr48bn in annual sales. Bernard Arnault, LVMH chairman, said recently that if the situation in Asia remained as it was this month, "DFS should make a profit in the first half of 1998 - a weak profit, but a profit nonetheless"

He listed four ways in which overheads were being cut - renegotiating rents, cutting head-office staff,

### EMI in £44m Priority deal

which later fell through. Steve Thompson

paid by SB amounted to £428,000.

EMI, the music group, has agreed terms to take full control of Priority Records, the Los Angeles-based rap label in which it already held a 50 per cent stake. Under the terms of the deal, mooted for several months in the US. EMI will make an immediate cash navment of \$73m (£43.7m), of which \$10m is an advance against performance-related payments expected to total an additional \$70m over five years.

The Priority acquisition follows stringent cost-cutting at EMI's US operations, which led to roughly 200 job losses. EMI, long dogged by bid rumours, recently issued a profits warning. It is struggling to resolve a senior management crisis by striking a deal for Jim Fifield, the 27m-a year head of its music interests, to leave the group. Ken Berry and Martin Bandler, heads of its recording and music publishing interests, are then expected to join the main board. Alice Rewathorn

### INFORMATION TECHNOLOGY

### Computacenter plans float

Computacenter, the UK's largest private IT group, has appointed Goldman Sachs to advise it on a public listing in a move likely to value the company at about £900m. The group, which supplies personal computers and systems integration services to business and government, is likely to seek a listing within the next few

The company's existing investors include some 800 of the group's 3,300 employees, who own about 16 per cent. The move would allow Computacenter to use shares and options as incentives to new recruits - an increasingly important tool in the battle to attract skilled workers.

Institutional investors including Apax and Foreign & Colonial have a 29 per cent holding. The balance is held by Philip Hulme, chairman, and Peter Ogden, a non-executive director, who together founded the company in 1981. Both are likely to retain a substantial interest in the company when it comes to market.

Computacenter sales are expected to exceed £1bn in 1997, up from £840m. Analysts are forecasting pre-tax profits of £47m (£34m) for 1997. Christopher Price

### MANUFACTURING

### ABI goes into receivership

ABI Leisure Group, the caravan manufacturer, has been put into the hands of the receivers after falling to resolve its financial problems. The group, which is capitalised at £4.6m and employs 700 people, said it had fallen victim to its largest French distributor, which falled to pay its debts. It also blamed the strength of sterling. Last August ABI announced an investigation into mis-management of currency hedging that forced it into the red. The appointed receivers are chartered accountants Nick Dargan and Angus Martin of Deloitte and Touche. Arkady Ostrovsky

## SmithKline Beecham

COMMENT

What are SmithKline Beecham investors to make of the news that Jan Leschly is sitting on stock options which would be worth £66m if their chief executive could exercise them now? First, they should realise that he cannot. Even the basic share options only vest if SmithKline delivers a bigger total return than the average top UK or US company. That is not a terribly high hurdle to jump, but it is better than none. Moreover, Mr Leschly has to jump an even higher hurdle - delivering performance in the top 20 per cent of FTSE 100 companies - to receive the free shares from the company's mid-term incentive plan. Second, investors should appreciate that the options accumulated over several years; only a fraction was awarded last year. That said, the tums are eye-popping. Mr Leschly certainly ought to be fully incentivised to deliver shareholder value - making it all the more puzzling why the value-enchancing merger with Glaxo Wellcome cannot be resuscitated.

### UK cable

Is there light at the end of the cable duct? The industry's long-awaited consolidation is finally on the cards, with Telewest Communications seemingly on the point of beating NTL in the battle to buy General Cable. NTL is also buying Comcast. But will mergers improve the industry's battered image with investors? Since Cable and Wireless Communications was assembled via the sector's largest merger last April, it has outperformed the market by a modest 4 per cent. Telewest and General Cable have continued to underperform - by 20 per cent and 31 per cent respectively.

Through merging, CWC has cut overheads and its financing costs - benefits which should also apply to any combination of the remaining cable companies. Furthermore, CWC has shown that in cable, size matters. It is now big and confident enough to cut its own deal with the industry's bete noire, British Sky Broadcasting. But it would be wrong to view consolidation as a panacea. Lowering costs by centralising marketing and customer service operations is only valuable if the marketing strategy is right. Telewest is only now experimenting with smaller cable packages - discovering, belatedly, that customers are happier paying for channels they know they want to watch.

# Notice is hereby given that the Amanual General Meeting of Shareholders of LLOYDS INTERNATIONAL LIQUIDITY SICAV will be held at the registered office in Lummbourg, 1 rue Schiller, on 21 April 1998 at 10.00 a.m. with the following agends:

 Submission of the reports of the Board of Directors and of the Authorized Independent Author; 2. Approval of the argual accounts as at 31 October 1997 and allocation of the net results;

3. Discharge to the Authorised Independent Auditor for the financial period ended 31 Outsher 1997;

4. Election of the Authorised Independent Amilitor for the new Unantial year;
5. Advanced edgestour of the resignation of Mr Hens Jenni Reas the Board of Directors;
6. Election of Mr Nigel Lason as new Director of the Board for six year;

7. Re-election of Mr David Corporwsite as Director of the Board for the years and fixing of

The resolutions on the agends of the Annual General Meeting will require no quorum and will be passed by the majority of the votes expressed by the Shareholders present or represented at the Meeting. By order of the Board of Directors

The Enroue Article 26 is replaced by:

"The Bourd of Directors of the Conymony may decide to liquidate one Fund if the not assets of
such Fund full below an amount they consider appropriate for achieving the Fund's objectives
or if a change in the economic or political abustion relating to the Fund concerned would
justify such liquidation. The decision relating to the liquidation will be notified to the
abancholders concerned prior to the effective date of the Squiderion and the notification will
indicate the reasons for, and the procedures pertaining to, the liquidation, Unless the Board of
Directors otherwise decides in the Interests of, or to keep equal treatment between the
shareholders, the abuscholders of the Fund concerned may continue to request redemption or
convention of their fluores on the basis of the applicable out sacer value, taking into account the
estimated liquidation expenses. Aspets which could not be distributed to their beneficiaries
upon the date of the liquidation of the Fund will be deposited with the Custodian for period of
six months after the date of liquidation. After such time, the assets will be deposited with the
Custom as a successful processing the second of the th Under the same chromateness as provided above, the Board of Directors may decide to close down one Fund by negger two another Fund (the "new Fund"). Such merger may also be decided by the Board of Directors if required by the interests of the standardiser of any of the Funds concerned. Such decision will be notified to simulations one mouth before the date on which the merger becomes effective in entire to easible shorthedens to request retictoring of their shares. One of charge, before the operation involving contribution into the new Fund becomes effective. The polification will indicate the procedure and the restors for the merger."

## the Luxembourg state into ordinary shares, increasing the state's voting share from

### LFr5.1bn (\$135m) in 1997, after a LFr1.2bn loss in 1996, but said it had not made a decision on whether to restart dividend payments. Meanwhile, an extraordinary shareholders' meeting on Friday agreed to convert

22 to just over 30 per cent, and lifting the total voting stake of large shareholders -Arbed, the Luxembourg. based steel group that is which also include Belgian Europe's biggest in terms of output, returned to profits of holding company Société Générale de Belgique with now renamed Aceralia. The just over 9 per cent - from 47 to 52 per cent.

Arbed back in the black

However, the group firmly denied reports in the Spanish press that the move indicated that the Luxembourg government was preparing to sell its 30 per cent stake. 878,277 non-voting prefer-ence shares in Arbed held by some time to simplify its some time to simplify its shareholder structure by removing non-voting preference shares

Last year Arbed achieved a new dimension as a steel maker by taking a 35 per cent stake in Spain's Corporacion Siderurgica Integral, acquisition took the group ahead of France's Usinor and Germany's Thyssen/Krupp to become Europe's biggest

raw steel maker, and the world's third largest. The group said that, if Aceralia had been consolidated into its results, profits would have reached LFr6.6bn, and total sales LFr364.3bn. Preliminary unaudited results released

on Friday showed sales without Aceralia jumped from LFr232.2bn to LFr268.6bn. Aceralia's results will be fully consolidated from this

Arbed said the acquisition marked a "qualitative step forward in the expansion, modernisation and global strategy" of the group.

Total raw steel production increased 6.1 per cent to 12.5m tonnes last year including Aceralia, the total would have been 18.8 tonnes. Rolled steel products increased 9.5 per cent to 11m

# Call for more French disclosure

French investors want company directors to provide far greater information on remuneration and other aspects of corporate governance in their annual reports, according to a new survey of shareholders and executives

Out of more than 500 investors questioned, 82 per cent wanted directors to disclose the boards on which they sit, 80 per cent wanted disclose on the number of

shares they hold and 73 per cent wanted details of directors' pay, according to the analysis carried out by Ecocom, a communications conwith the accountants Deloitte Touche Tohmatsu.

The findings directly challenged the traditional reluctance of French companies to disclose information on top executive remuneration. They showed 43 per cent of companies had ruled out providing more information on remuneration.

Under French regulations. companies have only very limited obligations to disclose the aggregate pay of the highest paid executives sultancy, in conjunction as a single figure, although there have been a number of calls for additional voluntary. disclosure. A few companies such as Suez-Lyonnaise des Eaux, the utilities group - have gone further, but most provide the strict legal

minimum in their annual Speaking at the launch of

head of Global Advisers, a consultancy for pension funds, said: "US investors do not necessarily want detailed information on how much each director earns. They want reassurance that executive remuneration is linked to performance."

Serge Weinberg, chief executive of Pinault Printemps Redoute the French retail group, said: "In France we are still at the level of the letter rather than the

convertibles market was Bank. Two weeks ago the investor earns interest even if they are not very worth \$315bn, of which well another German insurance on the bond and can always get its money back. At the same time the bond offers exposure to potential share price appreciation and the cate at Lehman Brothers. option to buy at a later date

Bankers say the growth of to consideration of convertibles as a separate asset class. This is attracting more investors from London, where the greatest pool of money is available. With yields on all types of fixedincome instruments falling, investors are looking increasingly to convertibles in their search for both yield

and value. Are they getting it? That is a difficult issue, given the complexity of pricing convertible bonds that have interest rate, equity and conversion elements. The success of recent issues is not necessarily attributable to the fact that they offered exceptional value, bankers

say. "Because stock markets

cheap. There is an imbalance between supply and demand," says Andrew Moffat, director of equity syndi-

How long the favourable context for convertibles lasts is anyone's guess, and both European issuance is leading issuers and investors are loath to make predictions. With pressure to offload cross-shareholdings now a corporate reality, supply is not likely to diminish.

Many potential issuers, therefore, are leading European companies, and from next year their bonds will have the added attraction of being denominated in euros. That should attract more US buyers, analysts say. -

"US clients who were unwilling to consider convertibles denominated in French francs, Italian lire or even German marks may be more inclined to consider investments in the euro, for which even the most provincial US investment house is likely to have a currency view," Deutsche Morgan Grenfell observed in its con-

## Morgan assets arm at crossroads

### Despite the doubters, Ramon de Oliveira's priorities are clear, writes Jane Martinson

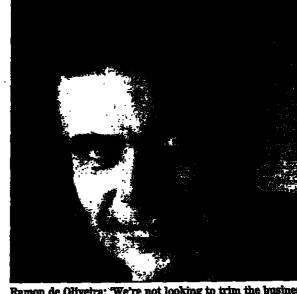

amon de Officeira has a disconcerting habit of answering questions with one of his own. "You ask about large acquisitions," says the head of J.P. Morgan's asset management arm. "White companies are there to bus?"

A combative approach may be natural for a man who has had to answer several questions since his appointment last May. Most of these have focused on how the division; which had \$278bn of assets under management at the end of last month, can compete and expand in a rapidly consolidating market.

Should it make an acquisi tion in order to fight ever larger competitors? And how will it move into the retail market without alienating the bedrock of its success blue-chip US pension funds? In recent weeks Mr de Oliveira has also faced questions on how the company is coping with a 5 per cent staff reduction decreed by its US

banking parent. One pension fund consultant expressed a common fear. "It isn't part of the asset management culture to knock 5 per cent off the workforce just to get costs down," he said. "It's the sort of thing bankers do, and you have to wonder if it means that the bankers are taking control." These fears, added to persistent takeover rumours about J.P. Morgan itself, have contributed to a sense of uncertainty among asset management clients and consultants.

Mr de Oliveira is impatient with the suggestion that closer links with the bank are necessarily a bad thing, ganisation inevitable. Staff achieve priority number two: to a giant.

Ramon de Oliveira: "We're not looking to trim the business'

across its businesses.

He also dismissed the idea that job cuts could hurt the business. "Our future profitability is important to clients," he says, before adding that investment levels will be maintained.

"We are not looking to trim the business. But if you are asking whether we are looking at ways to do things better at lower cost then the answer is yes." In doing so the division aims to boost a on his list of priorities. financial performance which lags behind that of its peers. Morgan executives have suggested that its rapid growth in the past three

One of his aims is to further numbers increased 42 per leverage the enviable rela- cent to more than 3,000 in tionship Morgan has with a three years to the end of 1997 raft of blue-chip clients as the business expanded to become the 10th largest money manager in the US.

> the company's European operations, said: "You do have some fat when you grow that fast. As good as you are, the ability to grow 50 per cent and be sure that there is no wastage is difficult."

In spite of recent events Mr de Oliveira puts increased profitability third

The first is to maintain the company's leading position in providing defined-benefit pension plans. This has not stopped the division from years has made some reortaking robust decisions to

expansion into the faster growing market of defined contribution pensions.

Last year J.P. Morgan made its largest investment in almost 40 years when it bought a 45 per cent stake in American Century, a Kansas City-based asset management company, for \$900m.

which has built its business on the back of the sharp rise in defined-contribution pension schemes. The deal, which gives Mor

gan first right of refusal in a takeover, won a mixed reaction among financial services analysis. While some questioned the spending of almost \$1bn without gaining control, others saw it as a sbrewd strategic move.

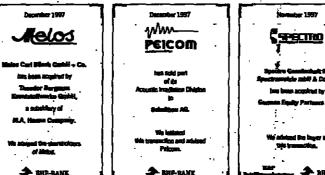

The business has also expanded into the fledgling mutual fund business across the Atlantic, with two deals in Germany and France in the past year.

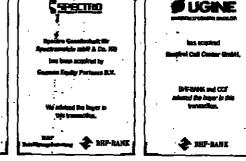

r de Oliveira, born in Argentina and raised in France, is keen to agree further joint ventures Hendrik van Riel, head of in Europe in coming months, and the launch of more mutual fund products. If he pulls off the difficult task of achieving his three priorities, many observers believe he stands a fair chance of moving on to greater things at Morgan. "De Oliveira wants to lead that organisation and he's not going to let a few asset management guys stand in the way," said

one US banker. Mr de Oliveira, a mixture of hauteur and charm, is dismissive. "My ambitions are irrelevant to this business. You are comparing a midget

ITALIAN BANKING PROSPECT OF EMU FORCES REVOLUTIONARY CHANGES

# Three-year plan at Mediobanca

European Monetary Union and the competitive challenges facing the banking industry have prompted Mediobanca and Monte dei Paschi di Siena to adopt changes that are little short of revolutionary for these two significant but peculiarly Italian banking institu-

Mediobanca, the Milan banking group at the centre of a convoluted network of Italy, outlined on Saturday at an extraordinary meeting a three-year strategy to turn it into a more accessible investment bank serving not only an elite group of large Italian companies but also

reached an agreement with direct and indirect stakes posed of its entire 2.1 per cal establishment has jeal-Cazenove, the UK stockbroker, to strengthen its equity research and analysis next month a L2.100bn operations and provide Mediobanca customers with access to Cazenove's extensive European equity research activities.

said the bank intended to remain focused on the Italian market but planned to boost its investment banking strengthening its corporate Generali. and equity-linked busi-

To support its new strategic plan as well as finance share of the recent cash

As a first step, it has which Mediobanca owns disclosed it had now dis- banks, the local Siena polititotalling nearly 12 per cent. (\$1.16bn) capital increase through a rights issue of new shares and warrants.

Mediobanca, whose operating income rose 14.7 per cent Vincenzo Maranghi, to L343bn in the first eight Mediobanca chief executive, months of its current financial year, also indicated it no longer considered its traditional stakes in a large number of heavyweight compabig business alliances in and asset management nies as sacrosanct, with the operations as well as exception of Assicurazioni

The bank, shaken in the past 12 months by internal management upheaval and ent failure to adapt to the call by Assicurazioni Gener- new competitive environali, Italy's largest insurer, in ment in the industry, also

cent stake in Olivetti, the ously guarded its ownership Mediobanca is launching telecommunications and of the bank.

> if the changes at Mediobanca are described in Italy as revolutionary, the decision by Monte dei Paschi to ger of being isolated at a launch a competition to select an investment banking adviser in view of the possible flotation of a 20-30 per cent stake in the Sienabased bank is seen as nothing less than historic.

The 500-year old bank, one of the oldest in the world, is currently owned by a charitable foundation linked and controlled by the city of Siena in Tuscany's traditional left-wing "red belt". Although one of the country's largest commercial

of equity By Tony Burns in Madrid However, the profitable The subscription period

bank, which has just reported a 68 per cent rise in 1997 net profits to L354bn, has increasingly felt in dantime of rapid consolidation in the Italian banking system. The decision to appoint an adviser to prepare for a stock market listing is thus seen as a first step to adapt the bank to the broad changes in the industry.

Schroders recently valued the bank at L10,500bn-L12,000bn. But the timing of the flotation and the possible involvement of Monte dei Paschi in the current Italian bank merger wave are shrouded in doubt.

# Departure of David Kyte signals shake-up at Liffe

The high-flier's resignation could spark an extensive reshuffle at Europe's biggest derivatives market, writes Samer Iskandar

board of the London International Financial Futures and Options Exchange is the latest in a series of shocks that have recently rocked Europe's largest derivatives market.

The controversial decision could spell the beginning of an extensive reshuffle among Liffe's executives, in the run-up to a crucial vote in May on Liffe's strategic orientations and its ownership structure.

Mr Kyte is one of Liffe's most prominent members. A self-made millionaire who now runs a small trading floor presence in London is empire, he epitomises the rags-to-riches dream of locals - red-jacketed speculators who can make almost limitless profits by working

hard and taking risks. He accuses the exchange's managers of failing to adapt swiftly enough to a changing environment. "I have no confidence in the chairman [Jack Wigglesworth] and son] to do what is best for the exchange," Mr Kyte said last week, after resigning.

chairman after his term ends aimed directly at Mr Hodson. The outburst has not won him any friends on the board. "The problem with

owns the bund" - the futures contract on German of Liffe's most actively traded products. However, with the experi-

ence of a successful trader, Mr Kyte's gamble was calculated, and his risks were largely hedged. His firm, Kyte Futures, is equipping half its 100 traders with computers linked to Frankfurt's electronic Deutsche Terminborse, which has recently stolen the leadership in trading German bond futures from Liffe. While Kyte's expected to remain significant, the bund accounts for

most of the firm's revenues. It will take Liffe 18 months to develop an electronic trading system capable of listing its main products, at a cost of £20m-£25m, in addition to £10m already spent.

Mr Kyte and others believe this time span is too long and point to existing alternachief executive [Daniel Hod- tives. Liffe's existing electronic system, which is used only after the market closes, would make a satisfactory With Mr Wigglesworth 24-hour trading facility and expected to step down as could be introduced immediately. Although the system in June, the criticism is APT - is in need of an upgrade, users say it is effi-

clent enough. "You do not need a car that can do 200mph to go on

what he describes as "Liffe's apathy" was only one of the factors behind his departure. His resignation was also motivated by a disagreement with colleagues on the board over the fees that Liffe charges on every trade and which are the exchange's main source of revenues. Liffe insiders say the

board had to choose between two fee structures: a flat fee of 25p per contract for every participant; and a two-tier structure (advocated by Mr Kyte) where most participants would pay 27p per contract, while locals who own seats - or trading permits would be charged only 17p.

Mr Kyte defends the twotier structure, pointing out that it is applied at the Chicago Board of Trade, the largest derivatives exchange. Other board members, however, describe this arrangement as unfair. Most locals "rent" the ability to trade from owners of seats. Only larger locals, such as Mr Kyte, own seats.

Analysts say lower fees for that can do 200mph to go on locals in Chicago are justi-the motorway," Mr Kyte fied by the so-called "single

BELGIAN RETAILING

## **Delhaize lifts profits 13%** despite US provisions

Delhaize, Belgium's biggest retailer and owner of the Food Lion supermarket chain in the US, announced a 13 per cent increase in 1997 net profits from BFr4.85bn to BFr4.9bn (\$130m), in spite of a BFr2.28bn provision for the closure of 61 US food stores. Sales Jumped from BFr412.3bn to BFr508.6bn, as the group opened 240 stores in the seven main countries in which it operates - a net increase of 116 after the closures

Delhaize said its market share grew from 13.2 to 13.4 per cent in Belgium, where it intends to open more neighbourhood stores to complement its out-of-town superstores. Food Lion plans to open enother 75 stores this year. Total spending for the year is planned at BFr20bn, including expanding the group's projects in the Czech Republic. Thalland and Indonesia.

Earnings per share rose from BFr84.2 to BFr94.8 and an 11.1 per cent increase in the dividend is proposed to BFr30.

**FOREST PRODUCTS** 

## Fletcher Challenge acquisition

Fletcher Challenge Canada, the forest products company, is responding to a prolonged strike at its three British Columbia mills by moving to acquire a controlling interest in the largest newsprint producer in the Philippines.

The company, majority owned by New Zealand's Fletcher Challenge, is in final negotiations to acquire some 51 per cent of Trust International Paper, known as Tipco, which produces 200,000 tonnes of newsprint. Fletcher Challenge Canada, which did not disclose the purchase price, said it could increase capacity at the Tipco plant to 350,000 tonnes. Scott Morrison, Toronto

### **G&J** expands in Austria

announced it had taken control of News Gruppe, an Austrian publishing business. G&J, a subsidiary of Bertelsmann, paid an undisclosed amount for a 25 per cent stake in News owned by the Axel Springer publishing group and a further block of shares held by the founders of the Austrian company. The move gives G&J, which sald it wanted to expand its busi-

ness in Austria, an overall stake of 75 per cent in News Gruppe. The Austrian company publishes the country's leading current affairs magazine, News, as well as a television listings title.

**GREEK TELECOMMUNICATIONS** 

## OTE earnings up 15%

OTE, Greece's public telecoms operator, raised full-year net profits 15 per cent to Dr197.5bn (\$822m). Operating revenues rose 19.3 per cent to Dr810.6bn. Analysts said revenue growth was aker than forecast because of delays in installing higher-earning digital lines. Less than 50 per cent of Greece's fixed-line natwork has been digitalised, but the pace is expected to pick up this year. OTE recently signed contracts worth Dr381bn with two local suppliers, Siemens Helles and Intracom, to install digital equipment. Kerln Hope, Athens

### EMERGING MARKETS PRICE GAINS AS INVESTORS REACT POSITIVELY TO YELTSIN SACKINGS

# Russian equities survive cabinet shock

The Russian equity market appears to have weathered the upbeaval last week caused by President Yestsin's sacking of the cabinet, with a gain of almost 2 per cent on the week. "Investors seem to hope

that political reform will deliver positive economic developments," says Matthew Meritt, emerging markets strategist at ING Bar-ings, Russian shares are now 28 per cent higher since their lows in January, although 40 per cent below the peak last

According to S&P Micropal, the fund trackers, emerging market funds sold a net \$900m of Russian stocks last year, as the mar-ket felt effects of the Asia contagion. Although Russia has

proved to be one of the more volatile markets among developing countries, it is exactly such sharp price movements which make it attractive for funds taking a high risk/high return strategy. As sentiment towards Russia turns cautiously posi- or of Brazil for Latin Amer-

tive, global emerging market funds and eastern European funds, looking for large positive returns are once again focusing out the country.

Stefan Brigher, director of Fleming Tyvestment Management, and he is looking to increase Fleming's flagship eastern European fund's expectare to Russia. Exposure that declined from 45 pear cert at the middle of 45 per cent at the middle of last year to 25 per cent.
While Respire felt the full effects of last year's turmoil

in Asia other parts of eastern Europe were relatively unscathed. The region has been insulated from the economic effects of the slowdown in Asian demand and is also expected to be relatively sheltered from a downturn in earnings expectations in other big

Western Europe plays a dominant role in regional trade flows and the economies of central and eastern Europe are increasingly looking west, says ING Barings in a recent report. Compared with the role of China in relation to south-east Asia

ica Russia's influence remains limited, it says. In continental Europe, some of the most conservative investors, such as pension funds in Switzerland, have started to move into

estern Europe. The case for investment in the region is supported by a difference in economic policies between eastern Europe and Asia. Credit Suisse First Boston points out that east European countries have pursued "better" currency policies than the Asians. Rather than a fixed peg to

the dollar - the policy of many Asian governments east Europeans have adopted a band or a crawling peg to a basket of reserve currencies. The carrot of being part of

the European Union, meanwhile, means that fiscal and monetary policies have remained tight. Companies have also maintained low gearing compared with their south-east Asia counter-

The region has been unfamiliar to UK investors, however, due to a shortage of historical links and trade

Germany and the Scandina-vian countries. "UK investors have felt more comfortable with markets like South Africa and India due to the historical ties," says Mr Böttcher. Some UK fund managers

are positive about Hungary. which has many strong manufacturing companies. Poland, meanwhile, rallied as investors "parked" money originally invested in Russia. But while domestic ported the bullish sentiment, share prices seem fully valned and the market faces the risk of money going back into Russia once sentiment turns, says Philip Poole, director of emerging Europe at ING Barines.

Valuing companies in the region seems to be a harder task for fund managers, as compliance and disclosure remain poor. Arnab Banerji, chief investment officer at Foreign & Colonial, likes the Czech Republic at a macroeconomic level but says he has not been able to invest in it, as corporate accounts are too opaque.

## Sidek nears debt deal as foreign creditors protest

By Henry Tricks in Mexico City

Sidek, the Mexican property conglomerate, is attempting to clinch a \$1.9bn debt restructuring today, despite threats from foreign bondholders that could land the company in Mexico's Byzantine bankruptcy courts.

Last-minute negotiations had yesterday failed to convince some bondholders to agree to the terms of the restructuring, which is aimed at recovering some of the lost fortunes within the biggest corporate casualty of Mexico's 1995 peso crisis.

If no agreement is reached the bondholders have threatened to seek bankruptcy proceedings against Sidek subsidiaries in Mexico, where the arcane legal system agent in the restructuring, is

could tie the plan in knots for years.

Sidek is understood to have persuaded most creditors to support the plan, but foreign creditors holding at least 10 per cent of Sidek's outstanding debt were still demanding better terms. They include BEA, a subsidiary of the Swiss commercial bank Credit Suisse, an original creditor, as well as bond funds that bought Sidek's

distressed debt at a discount. The foreigners allege that criminates against them in favour of Mexican hanks such as Banamex, the main lender to Sidek's tourism and property businesses before the company defaulted Banamex, Sidek's

the company's largest creditor and a major shareholder. Much hinges on whether the bondholders have a claim on Sidek's assets, including marinas, golf courses and hotels, as they believe they do. Their opponents claim their ownership

to receivables. The restructuring aims to ont all assets into a liquidation trust, to be sold over the restructuring plan dis- five years, with secured criminates against them in debt-holders having main rights to payment. The assets are worth only an estimated \$1.2bn, \$700m less than Sidek's debts. That means unsecured creditors, chiefly the foreigners, would

end up short.

(MAC) notes, guaranteed by

Sidek, gave them titles only

## **CME** to start trading rouble contracts

By Mikki Tait, Chicago

Russian rouble futures and options will start trading on the Chicago Mercantile Exchange, one of the two big US futures markets, on April 21 - the first time rouble contracts have been available outside Russia itself.

The CME had already announced its intention to of Mexican Acceptance Corp bring on rouble futures and options, but, in addition to setting a firm date for their launch, also detailed the contracts' structure.

Each contract will be cashsettled and sized at Rbs560,000, equivalent to about \$82,020. The contracts will be traded around the clock, either via the CME trading floor during normal Chicago trading hours, or via the exchange's electronic Glober system after hours.

The minimum tick size will be \$0.000025 per rouble. or about \$12.50 a contract. The launch is still subject to final regulatory approval from the US Commodity Futures Trading Commis-

The CME says the decision to introduce rouble futures reflects the growing trade and investment ties with Russia and claims that the contracts will enable banks. institutions and individual investors to better manage the foreign exchange risk posed by those links.

However, the unpredictable political climate in Russia has caused some analysts to speculate that the new contracts could be highly volatile, and question how quickly liquidity will develop if the currency nosedives.

## Meeting of shareholders

Convocation for the Annual ders to be held on Wednesday, April 15, General Meeting of Sharehol 1999 at 02.00 p.m. in the Okura Hotel, Ferdinand Bolstraat 333,

1 Opening 2 Annual Report of the Executive Board for 1997. 3 Adoption of the annual accounts for 1997;

# MARKETS WEEK

March 30 - April 5

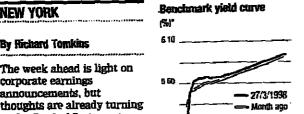

### **NEW YORK** By Richard Tomkins The week ahead is light on corporate earnings

to the flood of first-quarter results that will begin the week after next. Worries that the numbers will disappoint were one of the factors preventing the Dow Jones Industrial

announcements, but

Average from passing the 9,000 level last week. The recent surge in US stock prices has taken the price/earnings ratio on the Standard & Poor's 500 index to its highest recorded level, raising the risk of a sharp correction if earnings fall short of expectations. So any high-profile profit warnings this week could shake

investor confidence. On the other hand, equity and bond markets remain underpinned by solid US economic fundamentals. In spite of strong growth in the US economy, low oil prices and the Asian crisis have stifled the threat of inflation, making it unnecessary for

the Federal Reserve to spoil the party by raising interest

The Fed's open market committee meets tomorrow to consider monetary policy. but with the economic background so benign, few analysts think there is any likelihood of an interest rate

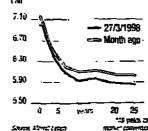

### LONDON By Philip Coggan

Having failed to close above 6,000 in the past few sessions, the FTSE 100 index may make a final assault on that level before the end of the tax year. Cash-flow from institutions and personal investors appears strong. although there are some concerns about valuation after the vield on the All Share index fell to its lowest since records began.

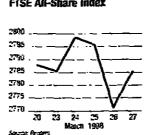

A smattering of UK economic news may give investors some idea about the direction of interest rates. Consumer credit data and the Confederation of British Industry's distributive trades survey may show whether, as indicated by recent retail sales numbers, high street spending is slowing.

The purchasing managers index will point to the strength of manufacturing. which has been hit by the strength of the pound. Trade-weighted sterling reached its highest since February 1989 last week. market

### Benchmark yield curve

FISE All-Share index

However, the main market moving news of the week may come from the US. where the Federal Reserve Open Market Committee meets on Tuesday and the non-farm payroll report will be released on Friday. A rise in US interest rates could finally kill off the bull

### French sugar crop likely to boost Eridania

Eridania Béghin-Say, the eastern Europe, including ZT French food group, will Kruswica, Poland's largest tomorrow report net profits of FFr1.64bn-FFr1.98bn, compared with FFr1.66bn increase its range of high-(\$270m) in 1996, according to analysts' forecasts. Sugar accounts for roughly half of Eridania's sales and the success of last year's French sugar crop will have helped boost earnings.

The company reported that weather conditions were favourable during the growing season and yields would be at least equivalent to those of 1996. In 1997 Eridania disposed of some nonrefocus on core activities. It

oilseed-crushing and bottledoil marketing company, to margin products.

Further acquisitions in Austria, Denmark and South Africa have also added to earnings. Operations in Italy and the US continued to be problematic during 1997 and poor harvests in Italy were aggravated by the lira's strength, analysts said. AFX-News. Paris

• ING, the Dutch banking and insurance group. is expected on Thursday to report net profit for 1997 of Fl 4.05bn-Fl 4.1bn, compared also made acquisitions in with Fi 3.32bn (\$1.61bn) a However, David Nisbet at

### TODAY

• London & Manchester. the UK assurer, is expected by NatWest Markets to unveil a fall in life profits of about 14 per cent to £39.7m (S66.3m). However, profits from non-life activities is expected to be higher. Overall, NatWest expects a pretax operating profit of £48.5m, down from £52.2m.

the broker has told clients that the share price reaction is likely to focus on the new embedded value information. to be released for the first time. This should make it easier to calculate figures. Mr Nisbet forecasts an embedded value of £482m. equivalent to 3950 a share.

 The economies of scale and quality management of Blue Circle, the cement company, made it a favourite with investors. That confidence has been dented by worries about a downturn in economically troubled southeast Asia and intensifying competition in Chile, where market leader Holderbank is planning a new plant that may disturb the balance of supply and demand. Pre-tax 1997 profits are expected to rise 14 per cent to £340m."

 Manchester United is expected to unveil a rise in interim profits before tax and transfers from £15.7m to about £17m for the six months to January 31. But profits after transfers at the UK's largest quoted football club are forecast to fall sharply, because of the purchase of Henning Berg, the Norwegian defender. Manchester United is also expected to report a slowdown in merchandise sales.

Shares in Maiden Group have rallied after news of the recommended offer for fellow outdoor advertising company More Group, and final figures may show the attractions of the sector. A consensus of forecasts from First Call, the estimates service, suggests a pre-tax figure of £10.05m, up from an underlying £8m.

### TUESDAY

STOCK INDICES

• Highland Distilleries. producer of Famous Grouse whisky, reports interim

results with expectations of \$26m pre-tax profits, up from £24.9m last year. Observers will be interested in any indications of the hoped-for recovery of the UK scotch market where sales of Famous Grouse, the number two brand, recovered slightly last year. Further afield, much hangs on the the world market for single malts, with The Macallan recording strong sales growth, especially in the US.

• Jefferson Smarfit, the Irish paper and packaging group quoted in London, is expected to unveil final results in the region of IE135m (\$98m), down from 19201m last time, with investor attention likely to focus on whether the notoriously cyclical paper cycle has turned. Analysis will also be interested to hear any news on cost-cutting.

Lightside building materials companies - which make products including pipes and bathroom fittings - struggled last year, in contrast to comfortable earnings mates from First Call sog-

increases from producers of aggregates. Analysts are keen to see whether Hepworth, which falls into the first category, can buck the trend. But strong sterling and poor tracing conditions in the rest of Europe could make that tough. A cousensus of forecasts from First Call suggest pre-tax 1997 profits of £50.8m, down 20

 Lucas Varity reports annual results amid speculation about its next strategic move. Last week it restructured its debt facilities, and the £803m sale of the Varity Perkins diesel engines business has given it the firepower for a £700m-£800m acquisition in automotive or aerospace components. Fourth-quarter sales will be affected by the lower number of working days, but LucasVarity, under Victor ises of quarter-on-quarter profit margin improvements and of CARm merser-related.

gests a pre-tax figure of 233im in the year to January, up from £282m.

• United Assurance is also expected to unveil a fall in life profits, although the total pre-tax operating profit is set to come in at about £300m, up from £200m.

 Rugby Group, the cement and joinery company, is a minnow compared to Blue Circle. The company has been restructuring underperforming operations. The results should reveal whether the medicine is working. A consensus from First Call suggests a pre-tax figure of £71.2m, up about 21

### THURSDAY • \*\*

• Senior Engineering is full-year pre-tax profits of £40.5m, up from 31.5m las time in the first full year cost savings for the year. A since it disposed of the loss consensus of analysts' estimaking thermal engineerin

On 25 November last year, it was announced that Anglo American was promoting the formation of Anglogold - a globalty active gold mining and exploration company.

Vaal Reefs - to be renamed Anglogold Limited ("Anglogold") today, 30 March 1998 - will be the vehicle into which Anglogold and the Participating Companies will be merged and gold mineral rights, share interests and service agreements acquired from Anglo American and companies associated with it ("the Overall Transaction").

RAND COLD AND URANII

The preliminary exchange ratios published on 26 November 1997 have been examined by independent financial advisers - Standard Corporate and Merchant Bank ("SCMB") on behalf of Elandsrand, Ergo, Freegold and Western Deeps; FirstCorp Merchant Bank Limited ("FirstCorp") on behalf of Amgold, Eastvaal and Southvaal; and SBC Warburg Dillon Read on behalf of Anglogoid in the light of, inter alia, information provided by the independent technical adviser, Steffen, Robertson and Kirsten Consulting Engineers (Pty) Limited ("SRK").

Subsequent to signing the JCI agreement on 12 March 1998 with respect to the JCI transaction – detailed below (which, upon fulfillment of the conditions precedent, will result in a change of control of Joel), the joel board will appoint an independent financial adviser to advise it as to whether the terms and conditions of the proposed scheme and the exchange ratio of 1,33 Anglogold ordinary shares for every 100 loel ordinary shares are fair and reasonable to the shareholders of Joel. An announcement by the Joel board in this regard will be made in

SCMB, in considering its responsibilities to shareholders of Elandsrand, Ergo, Freegold and Western Deeps, recommended that the preliminary exchange ratios for Elandsrand and Western Deeps did not adequately reflect the valuations of these companies relative to Anglogold, and so the exchange ratios for these companies have been adjusted accordingly. Following further discussion, it was decided that the Eastvaal preliminary exchange ratio should also be adjusted.

The reasons for the adjustments are detailed below:

### EASTVAAL

During 1997, shareholders were advised that the structure of the ore body at No 11 shaft was under review, following the successful completion of a 3D seismic survey over the lease area. The structural results of this review, together with the method of accessing the deeper reserves of the shaft, were presented to investors after the announcement of the financial year-end results in Johannesburg on 22 January 1998.

The estimation of reserves, revision of the capital estimates and review of working costs have now been completed. The ore reserves reflect a 9 per cent improvement on the reserves published in the 1996 annual report, from 341 to 371 tons of contained gold. While there is a slight decrease in tonnage, there is a 3,4 grams/ton increase in the in situ grade. However, this contained gold will take longer to access than was originally

The revised layout should reduce capital expenditure by R300 million and allow for a more efficient hoisting operation, thereby decreasing travelling times to the working faces. This improved hoisting efficiency should flow through as lower unit costs and result, ultimately, in an increase in the project value.

When the plan was initially proposed regarding the incorporation of Deelkraal Gold Mining Company Limited ("Deelkraal") into Elandsrand it was assumed that, although certain improvements would be achieved immediately, it would take approximately two years to effect a complete turnaround. It is now believed that the time required to effect the turnaround might have been overestimated and that the quantum of the synergies which could ultimately be achieved as a result of the merger may have been under-estimated. In addition, the Deelkraal workforce has been

Total

4 488 891

366 154

368 172

71,4

# 7155

reduced by 20 per cent without any effect on gold production and this has had a noticeable, positive effect on unit costs of production. Consequently, it is believed that the Deelkraal turnaround has already been largely achieved and this should be reflected in the improved Deelkraal operating results for the quarter ending 31 March 1998.

WESTERN DEEPS

After the seismic events in May 1996, production was intentionally slowed at Western Deeps in order to reconfigure the face-shapes and revise the life-of-mine plan. This reconfiguration took some time to achieve and consequently Western Deeps' operating results, with the exception of the second six months of 1997 (which were not available to the market at the time of the initial announcement of the ratios), have been somewhat depressed. Production is now back on schedule and Western Deeps is currently outperforming its target. It is believed that these factors could have led to the market undervaluing Western Deeps relative to Anglogold.

The preliminary exchange ratios for Ergo, Freegold, joel and Southvaal have not been adjusted.

The final exchange ratios, therefore, are as follows:

	Preliminary exchange ratios*	Final exchange ratios	Based on final exchange ratios
Сотрапу	Number of Anglogold ordinary shares per 100 shares held	Number of Anglogold ordinary shares per 100 shares held	Expected number of Anglogold ordinary shares to be issued (millions)**
Eastvaal	2,13	2,30	7,2
Eiandsrand	6,56	8,50	9,7
Ergo	2,80	2,80	1,4
Freegold	11,59	11,5 <del>9</del>	13,2
Joel	1,33	1,33	4,8
Southvaal	40,08	40,08	7,5
Western Deeps	47,35	53,00	14,7
T-1-			

\*Preliminary exchange ratios were, as indicated in the announcement published on 26 November 1997, determined on the basis of the simple average of the dosing prices on the Johannesburg Stock Exchange ("JSE") for the 30 trading days up to and including 21 November 1997

\*\*Total number of shares has been calculated as if all the subtransactions constituting the Overall Transaction were successful

Following the adjustments to the exchange ratios, SCMB is of the it the terms and conditions of the schemes are f reasonable to the shareholders of Elandsrand, Ergo, Freegold and Western Deeps; FirstCorp is of the opinion that the terms and conditions of the schemes are fair and reasonable to the shareholders of Eastvaal and Southvaal, and is of the opinion that the schemes, insofar as they relate to Amgold, are fair and reasonable. SBC Warburg Dillon Read is of the opinion that the Overall Transaction, which includes the Joel exchange ratio, is fair and reasonable to the shareholders of Anglogold. In forming these opinions, the independent financial advisers considered a variety of valuation methodologies including discounted cash flow valuations of Anglogold and the Participating Companies; industry valuation benchmarks; historical share prices and volumes of shares traded; the value of the gold mineral rights, service agreements and share interests acquired by Anglogold as nart of the Overall Transaction, and current economic, regulatory, market and other conditions. As mentioned above, the Joel board will publish an announcement on the Joel exchange ratio in due

### MECHANICS OF THE OVERALL TRANSACTION

- The Overall Transaction comprises:
- the schemes of arrangement;
- the alternative offers;
- the acquisition of the gold mineral rights; ■ the acquisition of the share interests; and
- the cession and assignment of the service agreements. The implementation of the Overall Transaction is subject to the

fulfillment of the conditions precedent outlined below. Where Anglogold ordinary shares are to be issued in terms of the

overall transaction, such shares have been valued at a price of 19 500 cents per share, being the closing price of an Anglogold ordinary share on the JSE on 31 December 1997, the day before the proposed effective date of the Overall Transaction.

### THE SCHEMES OF ARRANGEMENT

Anglogold will propose schemes of arrangement ("schemes") in terms of Section 311 of the South African Companies Act, No. 61 of 1973 (as amended) ("the Companies Act") between the Participating Companies and their respective shareholders in terms of which the Participating Companies will, on implementation of the schemes, become wholly owned subsidiaries of Anglogold. Shareholders of the Participating Companies will receive Anglogold ordinary shares in accordance with the final exchange ratios set out above.

### THE ALTERNATIVE OFFERS

In view of the possibility of a scheme not proceeding for any reason, an offer referred to as the alternative offer, will be made to the shareholders of the relevant Participating Company, other than joel (Note: the alternative offers will not be made in any area

of jurisdiction where it is illegal to make such offers without complying with the formalities required by such jurisdiction and with which the offers do not comply). An alternative offer in relation to Joel will only be made if the acquisition of JCI's share interest in Joel by Anglo American and companies associated with it becomes unconditional. Anglo American and companies associated with it have undertaken to accept each such offer that becomes effective.

if the relevant scheme does not proceed and, as a result, an alternative offer becomes effective, accepting shareholders will receive the same number of Anglogold shares as they would have received under the relevant scheme. The alternative offer will become effective from the date of notification in the press and remain open for a period of not less than 21 days, which period, with the consent of the Securities Regulation Panel ("the SRP"), Anglogold may extend from time to time.

In the event of an acceptance in respect of 90 per cent of the shares held by the offerees in terms of Section 440K of the Companies Act, the compulsory purchase provisions of that section will be applied by Anglogold in respect of the relevant Participating Company.

### GOLD MINERAL RIGHTS

Anglogold will acquire from the Promoters those mineral rights in South Africa which relate principally to gold, at a value determined by SCMB.

Anglogold will purchase selected mineral rights in South Africa outright as they are either contiguous to its enlarged operations or are regarded as highly prospective. They will be acquired for the agreed value of R165 million through the issue of 846 154 Anglogold ordinary shares.

The remaining gold mineral rights in South Africa, approximating an area of 2 000 km², are to be acquired by Anglogold for:

- an upfront payment of R1,96 million satisfied by the issue of 10 051 Anglogold ordinary shares;
- a royalty of 20 per cent of pre-tax profits, or a 15 per cent. equity participation in the project for no further consideration, at the discretion of the relevant vendors, should these mineral rights be exploited; and
- a share of the profits to the vendors should these mineral rights be disposed of by Anglogold. This profit share would be 95 per cent in the first year, reducing by 5 per cent per annum to 75 per cent in the fifth year and thereafter.

The mineral rights to be acquired by Anglogold in Africa but outside South Africa have been valued by SCMB and include the following:

- assets in Tanzania valued at R382.5 million, which comprise joint ventures on 44 gold prospecting licences in Tanzania with local and international companies, together with 12 licences held in the name of the Tanzanian companies. Current prospecting indicates that the defined resources could increase considerably. This is to be settled by the issue of 1 961 744 Anglogold ordinary shares; and
- permits in Senegal and other African countries, for which the consideration has been determined as follows:
- an upfront payment of R19,5 million to be settled by the issue of 99 897 Anglogold ordinary shares;
- a 20 per cent share of the after tax profits if the area is exploited, which is convertible into a 20 per cent equity participation for no further consideration at the vendors' discretion; and
- a 20 per cent share of the after tax profit to the vendors on the sale of the properties, if the profit share has not been converted into equity.

SCMB is of the opinion that the values of the gold mineral rights as outlined above are fair and reasonable in the context of the Overall Transaction.

### SERVICE AGREEMENTS

Anglo American's service agreements with the companies which will form part of Anglogold will be ceded and assigned to Anglogold. The valuation of the service agreements between Anglo American and Anglogold, the Participating Companies and certain unlisted companies was determined by SBC Warburg Dillon Read, the independent financial adviser to Anglogold. The consideration of R666,4 million in respect of these service agreements, which also includes R3,6 million in respect of the service agreement between Anglo American and Erongo Mining and Exploration Company Limited, as valued by SCMB, will be satisfied by the issue of 3 417 436 Anglogold ordinary shares. The consideration for the cession and assignment of the service agreement between Anglo American and Anglogold will only be settled in shares with the consent of Anglogold shareholders, failing which the consideration will be paid in cash plus interest. Furthermore, as part of the transaction with JCI, Anglogold will acquire the service agreement between ICI and Joel for R50 million in cash and will pay R12,5 million in cash as a reimbursement for JCI's costs of re-organisation and restructuring.

### DRIEFONTEIN

Anglogold will acquire the 18,7 per cent interest in Driefontein Consolidated Limited's ("Driefontein") shares held by Anglo American, Amgold and De Beers for a consideration to be settled by the issue of 5 553 595 Anglogold ordinary shares, in the ratio of 14,59 Anglogold ordinary shares for every 100 Driefontein shares held. SCMB, the independent merchant bank, has determined that this exchange ratio is fair and reasonable. In addition, Anglogold will acquire a 0,4 per cent indirect interest in Driefontein through its acquisition of 89,4 per cent of Western Ultra Deep Levels Limited from Anglo American and companies associated with it. The direct and indirect share interest acquired of 19,1 per cent of Driefontein, when aggregated with the interest currently held by Anglogold, will result in Anglogold holding an interest of 21,5 per cent in Driefontein.

UNILISTED SHARE INTERESTS Unlisted share interests will be acquired by Anglogold at values determined by SCMB, as set out below:

> number of Anglogold ordinary shares to Rand be issued

I 100% of Anmercosa Mining (West Africa) Limited which holds a 38 per cent interest in La Société d'Exploitation des Mines d'Or de Sadiola SA ("SEMOS") (the company that was established in 1994 to exploit the Sadiola Hill and other gold deposits in the SEMOS Exploitation Area situated in western Mail) and a 50% interest in Sadiola Exploration Limited (the company that effects gold exploration outside the SEMOS Exploitation Area, but within the Sadiois region)

....

- 100% of Erongo Mining and Exploration Company Limited ("Erongo"), which holds a 70% oint venture interest in the Vavachab Venture situated in Namibia
- 51,7% of Eastern Gold Holdings Limited, which has an entitlement to royalties from the profit generated from the Freegold
- 3 mine 71,8 389,4% of Western Ultra Deep Levels Limited, which holds mineral rights approximating 49km² in the Carletonville area, south of the
- current West Wits line, and interests in Elandsrand, Western Deeps and Driefontein Other share interests
- 442,5 2 269 335 5.7 29 487 7 522 039 1 466,7 In addition to the above, Anglogold will acquire:

· .		value US dollar millions
# 100% of Anmercosa Services Mail:	SA which	** ** ,* * **
provides services to SEMOS		12,3
Subordinated loan to SBMOS	٠.	105,8
■ Other loans		3,9
Total		122,0

which will be discharged in the form of an equivalent US Dollar denominated interest bearing loan account against Anglogold. SCMB is of the opinion that the values of the share interests detailed above are fair and reasonable in the context of the Overall Transaction.

### MINORCO'S GOLD INTERESTS

it was announced on 25 November 1997 that Anglogold was to approach Minorco to explore the possibility of a combination with Minorco's gold interests located in North and South America, the Far East and Australasia. Discussions are now in progress with Minorco in order to develop such a transaction which would significantly enhance Anglogold's global production and exploration portfolio.

### THE KI TRANSACTION

The agreement in principle with JCI, published on 26 November 1997, has been amended as was published on 13 March 1998. In terms of the revised transaction ("the ICI transaction"), subject to conditions precedent outlined below, JCI will exchange its: ■ 60 per cent interest in loel; and

■ its 3,0 per cent interest in Anglo American Platinum Corporation Limited

for a 21 per cent interest in Lonnho pic ("Lonnho") held by Anglo American and De Beers. Anglogoid will acquire the JCI service agreement with Joel for R50 million in cash and will pay R12,5 million in cash as a reimbursement for JCI's costs of reorganisation and restructuring. The difference in the value of the assets exchanged will be settled by a cash payment of R219 million from KI to Anglo American and De Beers.

Anglo American and De Beers will then inject the joer shares acquired from ICI, together with their and Amgold's existing shareholding in loel, into Angiogold for Anglogold ordinary shares ("the loel sub-transaction").

### PUTURE RELATIONSHIP BETWEEN ANGLO AMERICAN AND

Analogold will be the vehicle through which Anglo American will invest in future exploration and in mining of gold worldwide. On completion of the Overall Transaction, Anglo American and its subsidiaries will be Anglogold's largest shareholders with an equity interest of just over 50 per cent. Anglogold will be independently managed. This will be characterised by:

- P

。 ( 神)をルー: 二

•

\*\*

-22-

- a fully dedicated and entirely independent management, including its Chief Executive Officer, Bobby Godsell. The management will be remunerated by Anglogold and incentivised by an Anglogold share incentive scheme;
- a reconstituted board which will comprise not more than 17 members, three of whom will be executive directors with the balance being non-executive directors. Of the nonexecutive directors, five will be Anglo American nominees:

GELCO3.IE

# FIEOJIE

angle:

the managerial and financial capability and resources to carry out all aspects of its ongoing business activities;

where appropriate, the purchase of selected specialised services from Anglo American on normal commercial terms. Any such contract will be subject to the approval of a board committee consisting exclusively of directors independent of

no management or other contracts in terms of which any turnover or profit related fees are payable to Anglo American. Existing contracts of this nature will be ceded and assigned to Anglogold.

CONDITIONS PRECEDENT

Implementation of the Overall Transaction is subject to, inter alia, the following conditions precedent:

■ the passing by Anglogold shareholders, in accordance with the requirements of the Companies Act and the Listings Requirements of the ISE, at a general meeting of Anglogold shareholders, of all resolutions necessary to approve and implement the Overall Transaction; and

■ the passing by Amgold shareholders, in accordance with the requirements of the Companies Act and the Listings Requirements of the ISE, at a general meeting of Amgold shareholders, of all resolutions necessary to approve and implement the Overall Transaction. This condition can be waived at the instance of the Anglogold directors.

Each of the schemes of arrangement proposed by Anglogold between the relevant Participating Companies and their shareholders shall be subject to, *inter alia*, the following conditions

precedent: the fulfilment of each of the conditions precedent in respect of the Overall Transaction set out above;

■ the relevant scheme having been agreed by a majority representing three quarters (75 per cent) of the votes exercised by shareholders of the relevant Participating Company present and voting, either in person or by proxy, at a meeting of those shareholders convened in terms of Section 311 of the Companies Act;

■ the Court sanctioning the relevant scheme; and

the Order of the Court sanctioning the relevant scheme being registered by the Registrar of Companies.

The loel sub-transaction shall be subject to the following conditions precedent:

the approval by the JCI shareholders in general meeting of the JCI transaction; and

the approval by the Lonrho shareholders in general meeting of the eventual acquisition of a 21 per cent interest in Lonno for

The acquisition of the share interests shall be subject to, inter alia, the necessary approvals of shareholders not disposing of their interest in the relevant company, and in the case of SEMOS, these holders and the senior lenders.

FINANCIAL EFFECTS OF THE OVERALL TRANSACTION The financial effects set out below are based on historical financial statements prepared on the appropriation method of accounting for wasting assets in accordance with generally accepted accounting practice in the South African gold mining industry, it should be noted that the earnings per ordinary share set out below are historical and do not purport to represent future profits. It should also be noted that because of, inter alia, the wasting nature of mining assets, the net asset value figures set out below do not necessarily represent realisable values for the assets.

The transaction includes not only current profit generating operations but also the following assets that will generate

distributable earnings in the future:

Eastvaal – due to pay its first dividend in 2002; service agreements – an ongoing cost reduction; and

■ mineral rights which are contiguous to existing mining areas

and which could form part of future mining plans. The effect of the above is to dilute earnings in the short term and to increase them in the longer term. In addition, because the ratios have been based on life-of-mine valuations, and earnings are not evenly distributed over this period, the effect of the merger varies from company to company. Specifically, in the case of Ergo, the effect of the Overall Transaction is to extend the period in which dividends are received by Ergo shareholders from six years to in excess of 20 years. In the case of loel, no appropriation for capital expenditure was made in 1997 and

therefore, the figures are not directly comparable. The financial effects have been calculated at 31 December 1997 (in the case of Joe), the 30 June 1997 audited financial statements have been used) as if the transaction had been implemented on 1 January 1997 and are purely an aggregation of earnings and net assets without taking into account any operational synergies.

The tables below set out the financial effects of the Overall Transaction on the earnings and net asset value calculated on the appropriation basis attributable to: (Note: Where Anglogold shares are referred to these are ordinary

shares in Anglogold)

OPINIONS AND RECOMMENDATIONS

SRK is of the opinion that the technical data, as outlined in its independent technical adviser's report which it has prepared on Anglogold, each of the Participating Companies and certain other companies, is valid and accurate and has advised the boards of the Participating Companies and Anglogold accordingly. The aforesaid independent technical adviser's report has been used as the basis for valuations performed by SCMB and the analyses performed and opinions provided by SBC Warburg Dillon Read, FirstCorp and SCMB.

SCMB is of the opinion that the schemes are fair and reasonable to the shareholders of Elandsrand, Ergo, Freegold and Western Deeps and has advised the respective boards accordingly.

SCMB has determined the value of the gold mineral rights and the share interests and the Erongo service agreement, and has advised the boards of directors of the Participating Companies and Anglogold, Amgold, De Beers and De Beers Centenary AG of the values, bases and methods of valuation of each of these assets. SCMB is of the opinion that the values of the gold mineral rights and the share interests, including the exchange ratios as proposed in respect of Driefontein and the value of the Erongo service agreement, are fair and reasonable in the context of the Overall Transaction and has advised the boards of the Participating Companies, Anglogold, Amgold, De Beers and De Beers

Centenary AG accordingly. FirstCorp is of the opinion that the schemes are fair and reasonable to the shareholders of Eastvaal and Southvaal and has advised the respective boards accordingly.

FirstCorp is of the opinion that the schemes, in so far as they relate to Amgold, are fair and reasonable to Amgold shareholders and has advised the board of Amgold accordingly.

SBC Warburg Dillon Read has determined the value of the service agreements held by Anglo American, excluding the Erongo service agreement, and is of the opinion that the Overall Transaction is fair and reasonable to Anglogold shareholders and has advised the board of Anglogold accordingly.

RELATED PARTIES

In terms of the Listings Requirements of the JSE, the disposal of gold interests by Amgold to Anglogold is regarded as a related party transaction. Therefore, at the Amgold shareholders' meeting to approve the Overall Transaction, the resolution is subject to a simple majority of shareholders other than Anglogold (the related party) and its associates (which term is deemed to include Anglo American and its subsidiaries) being in favour.

The Overall Transaction is regarded as a related party transaction in respect of the acquisition by Anglogold of assets from Anglo American. Therefore, at the Anglogold shareholders' me resolution to approve or give effect to the Overall Transaction will be subject to a simple majority of the votes of shareholders other than Anglo American (the related party) and its associates (as defined by the JSE Listings Requirements).

DELISTING OF THE PARTICIPATING COMPANIES

Pursuant to the implementation of the Overall Transaction (and assuming that each scheme becomes effective), the Participating Companies will become wholly owned subsidiaries of Anglogold. Accordingly, applications will be made to the ISE and other relevant stock exchanges for the termination of the listings of the shares of the Participating Companies upon implementation of the schemes.

LISTING OF ANGLOGOLD

Application will be made to the JSE for a listing of Anglogold shares to be issued as a consequence of the Overall Transaction. Application will be made for the listing of the new Anglogold shares to be issued on the London Stock Exchange and the Paris

**DOCUMENTATION** 

Subject to the approval of the JSE, the Securities Regulation Panel, the High Court of South Africa and other regulatory bodies, circulars containing full details of the Overall Transaction and the notices convening the meetings of shareholders of the Participating Companies, Amgold and Anglogold will be posted to the respective shareholders concerned in due course.

M SATURDAY APREL

# TINDAY APRILS

The yen is like a boxer who has braved out several rounds against a stronger opponent. It closed last Friday debilitated at Y130.3 to the dollar. This week it could get it in the neck. The knock-out punch could land on Wednesday, the start of Japan's new fiscal year and of the "Big Bang" of financial deregulation.

Officials want to boost the Nikkei 225 share average until Tuesday, to help Japan's fragile banks, which balance sheets.

and the yen could be driven

on to the ropes.

Big Bang could then knock it to the floor. Among many deregulatory measures, the authorities will let Japanese investors place more money abroad. Given that the economy is weak, shares are artificially boosted, and bond yields are at post-war world lows, many investors will seize the opportunity. The capital outflows could hit the yen.

And in the next round, on Thursday, the currency meets the tankan. The Bank put the year-end values of of Japan's quarterly industry their shareholdings on their survey is expected to be of Japan's quarterly industry disastrous. Deutsche Morgan Officials seem to think a Grenfell forecasts the diffusion index of business conditions. The currency and the
